Doing Research in Business and Management Dan Remenyi, D. Remenyi, 1998-09-14 *Doing Research in Business and Management* has been written to help students obtain a thorough understanding of the main methodological issues and options that are available to them as business and management researchers undertaking a masters or doctoral degree *Doing Research in Business and Management* takes the reader through all of the important issues that need to be understood if a competent piece of research is to be produced at the masters or doctoral level in the business and management studies The authors explain the interrelationship between the theoretical and empirical research as well as the differences between positivism and phenomenology Not only do they put these concepts in context for the business and management student but they go on to discuss how these different approaches are used in practice Furthermore the authors discuss the implications of quantitative and qualitative approaches to research The book offers high level advice on different numerical techniques available to researchers as well as different software packages that may be used for analyzing qualitative data The book also discusses the use of the Internet to support research in masters and doctoral programs

Novel Approaches to Organizational Project Management Research Nathalie Drouin, Ralf Müller, Shankar Sankaran, 2013 Project management PM traditionally employed to implement projects has developed into Organizational Project Management as organizations are increasingly using projects to deliver strategies The emergence of program and portfolio management has also contributed to this move PM researchers need to become more innovative in their research approaches They need to connect with the broader currents of social science in relevant fields such as organization theory Outside the specific field there is a great deal that can usefully be imported transformed and translated so that it is fit for project management research purposes More trans disciplinary translational and transformational approaches for conducting project related research are required and this book goes a long way to providing foundations for them The book encompasses reflections on fundamental questions underlying any research such as the type

of knowledge sought as well as the epistemological and ontological assumptions. It broadens research methods and theory perspectives drawing on contemporary approaches such as action research, soft systems methodology, activity theory, actor network theory, and other approaches adopted in related scientific and technological areas that are only recently being adopted. To achieve this, the book's editors have necessarily been eclectically interdisciplinary in their contributor list. They have included contemporary research methods and designs from areas allied to project research such as organization science, organizational studies, sociology, behavioral science, and biology, providing innovative invitations to research design and methodological choice. Overall, this book makes a significant contribution to the maturation and development of project management research as a specialty in the broader social sciences, one that is a less reliant handmaiden or under laborer to purely technical issues but which appreciates that any material construction is always a social construction as well, one that implies episteme and phronesis, knowledge and wisdom as well as techne or technique. Project managers may not realize it, but the most important aspects of what they manage are the meanings, interpretations, and politics of projects, and not merely the technical aspects.

This updated and enhanced edition responds to the latest developments in OM, including the growing prominence of services and production of intangible products and the increasing use of secondary data and of mixed approaches. Alternative research approaches are included and explored to help with the early planning of research. This edition also includes expanded literature review and analysis to guide students towards the next steps in their reading and more detailed step-by-step advice to tie theory with the researcher's own practice.
