Olson,2015-01-06 With a degree in engineering developing a step by step process for HVAC energy optimization comfort improvement and indoor air quality for existing schools and commercial buildings came naturally for this HVAC service and building automation contractor With 35 years experience in the industry the author Tom Olson is convinced that over 75% of all HVAC maintenance requirements are simply keeping all system components clean dry and lubricated Further no one is better capable of providing those services at the lowest possible cost than well trained in house personnel However the author s experience is that most buildings are accomplishing less than 50% of all necessary services The purpose of this book is to help in house personnel and their managers better operate their facilities The building block system suggested to optimize HVAC energy consumption comfort and indoor air quality is a simple six step process 1 Fix what s brokenIt s impossible to provide the desired efficiency comfort and indoor air quality with broken or damaged equipment If it s broken it should be on a priority list for repair or replacement This book will help you better understand what to look for and why the repairs are important 2 Clean what s dirtyDirt and debris are your HVAC system s biggest enemies It causes premature equipment failure inefficiencies and indoor air quality related problems Tom grew up in a family restaurant His dad wouldn t go to be until the kitchen was clean So when he joined the HVAC industry the filth that he found was shocking How can these systems possibly operate efficiently with all that dirt Well they can t This book spends a great deal of time talking about getting and keeping HVAC systems clean including specific recommendations on air filters 3 Change methods of operations made possible because the equipment is no longer broken and dirtyBuilding maintenance staff will be more productive and efficient when given the knowledge and the time to operate a facility free of broken and dirty equipment Often times however they ve never had an opportunity to operate a building free of such deficiencies Methods of how to cover up for such deficiencies frequently just get passed from generation to generation This book will help break that chain of events 4 Temperature control system revisionsEnergy efficiency comfort improvement and indoor air quality are not mutually exclusive terms It is not necessary to sacrifice one to have the other two Current antiquated control sequences are often the root cause of preventing success in these areas It is important to utilize proven modern control sequences to eliminate simultaneous cooling and heating including simultaneous atmospheric cooling and heating If your mixed air temps are always 55 F or 60 F you re providing costly uncomfortable sequences of operation ASHRAE has discouraged it since 1975 It s time to stop This book can help 5 Install new technology hardwareIn the hands of the right technician there are few control sequences that pneumatic temperature control systems can t accomplish The problem is those technicians are few and far between It is frequently in your best long term interest to replace defective equipment instead of investing in repairs of old antiquated equipment This applies to more than just pneumatic controls Old boilers are another example of old equipment that have outlived their effectiveness In many instances there are new unique and often low cost equipment solutions This book will share many ideas with you 6 Implement preventive maintenance routines Preventative maintenance is an area that

should be incorporated throughout the six step process A good schedule of preventative maintenance is one of the most important factors in managing time and financial resources Again this book will help your in house maintenance personnel become more self sufficient *Stores* ,1989
