

are or increased wear. Carefully clean the outside of the pump.

NOTE: The inlet ports in most gear pumps are larger than the outlet ports.

NOTE: If the pump is held in a vise for disassembly, make sure the vise does not hold the pump too tightly and cause distortion of the pump body.

NOTE: The position of the seals is important. In some pumps the direction of pump rotation is changed by changing the position of the seals and bearings. The holes in the seals must be aligned with the oil passages in the housing sections. The oil passage for the thrust plate is in the outlet chamber.

Make sure that you make careful notes of the location and orientation of the parts and seals during disassem-

by. Some of the parts are similar, but not exactly the same and it can be difficult to make an identification if they are mixed.

3. Remove the cap screws or nuts that hold the bearings together. Use a plastic hammer to separate the bearings. Do not damage the machined surfaces.

4. Remove the gears and thrust plates (if used). Make a note of the positions of the thrust plates, seals and gaskets. Do not use a punch to mark the parts. Remove any springs and check valves.

5. Remove the bearings with a puller. In some pumps the bearing blocks or plates must be replaced with the bearings.

6. Remove the front seal.
