How To Become A Network Security Engineer:

A Guide to the National Initiative for Cybersecurity Education (NICE) Cybersecurity Workforce Framework (2.0) Dan Shoemaker, Anne Kohnke, Ken Sigler, 2018-09-03 A Guide to the National Initiative for Cybersecurity Education NICE Cybersecurity Workforce Framework 2.0 presents a comprehensive discussion of the tasks, knowledge, skill, and ability (KSA) requirements of the NICE Cybersecurity Workforce Framework 2.0. It discusses in detail the relationship between the NICE framework and the NIST's cybersecurity framework CSF, showing how the NICE model specifies what the particular specialty areas of the workforce should be doing in order to ensure that the CSF's identification, protection, defense, response, or recovery functions are being carried out properly. The authors construct a detailed picture of the proper organization and conduct of a strategic infrastructure security operation, describing how these two frameworks provide an explicit definition of the field of cybersecurity. The book is unique in that it is based on well-accepted standard recommendations rather than presumed expertise. It is the first book to align with and explain the requirements of a national level initiative to standardize the study of information security. Moreover, it contains knowledge elements that represent the first fully validated and authoritative body of knowledge (BOK) in cybersecurity. The book is divided into two parts. The first part is comprised of three chapters that give you a comprehensive understanding of the structure and intent of the NICE model, its various elements, and their detailed contents. The second part contains seven chapters that introduce you to each knowledge area individually. Together, these parts help you build a comprehensive understanding of how to organize and execute a cybersecurity workforce definition using standard best practice.

Securing Delay-Tolerant Networks with BPsec Edward J. Birrane, III, Sarah Heiner, Ken McKeever, 2023-01-05 Securing Delay Tolerant Networks with BPsec: One stop reference on how to secure a Delay Tolerant Network (DTN) written by experienced industry insiders. Securing Delay Tolerant Networks with BPsec answers the question: How can delay tolerant networks be secured when operating in environments that would otherwise break many of the common security approaches used on the terrestrial Internet today? The text is composed of three sections: 1) security considerations for delay tolerant networks, 2) the design, implementation, and customization of the BPsec protocol, and 3) how this protocol can be applied, combined with other security protocols, and deployed in emerging network environments. The text includes pragmatic considerations for deploying BPsec in both regular and delay tolerant networks. It also features a tutorial on how to achieve several important security outcomes with a combination of security protocols. BPsec included. Overall, it covers best practices for common security functions, clearly showing designers how to prevent network architecture from being over-constrained by traditional security approaches. Written by the lead author and originator of the BPsec protocol specification, Securing Delay Tolerant Networks (DTNs) with BPsec includes information on the gap between cryptography and network security, how security requirements constrain network architectures, and why we need something different. DTN stressing conditions: covering intermittent connectivity, congested paths, partitioned topologies.

limited link state and multiple administrative controls Securing the terrestrial internet involving a layered approach to security the impact of protocol design on security services and securing the internetworking and transport layers A delay tolerant security architecture including desirable properties of a DTN secure protocol fine grained security services and protocol augmentation Securing Delay Tolerant Networks DTNs with BPsec is a one stop reference on the subject for any professional operationally deploying BP who must use BPsec for its security including software technical leads software developers space flight mission leaders network operators and technology and product development leaders in general
