### **Secondary Mathematics Instruction** Margaret A. Farrell, Walter A. Farmer, 1988 **Math** Albert B.

Bennett, Leonard T. Nelson, 1985-12 *Designing Learning Environments for Developing Understanding of Geometry and Space* Richard Lehrer, Daniel Chazan, 2012-11-12 This volume reflects an appreciation of the interactive roles of subject matter teacher student and technologies in designing classrooms that promote understanding of geometry and space Although these elements of geometry education are mutually constituted the book is organized to highlight first the editors vision of a general geometry education second the development of student thinking in everyday and classroom contexts and third the role of technologies Rather than looking to high school geometry as the locus and all too often the apex of geometric reasoning the contributors to this volume suggest that reasoning about space can and should be successfully integrated with other forms of mathematics starting at the elementary level and continuing through high school Reintegrating spatial reasoning into the mathematical mainstream indeed placing it at the core of K 12 mathematics environments that promote learning with understanding will mean increased attention to problems in modeling structure and design and reinvigoration of traditional topics such as measure dimension and form Further the editors position is that the teaching of geometry and spatial visualization in school should not be compressed into a characterization of Greek geometry but should include attention to contributions to the mathematics of space that developed subsequent to those of the Greeks This volume is essential reading for those involved in mathematics education at all levels including university faculty researchers and graduate students

**The Wonderful World of Mathematics** Diane Thiessen, Margaret Matthias, 1992 The National Council of Teachers of Mathematics NCTM has articulated goals in the pursuit of mathematics literacy that include learning to value mathematics becoming confident in one s mathematics abilities becoming a mathematical problem solver learning to communicate mathematically and learning to reason mathematically Literature that explores mathematical concepts seems to be a natural tool for attaining those goals The NCTM formed a committee to read and review books and to prepare the manuscript for this annotated bibliography of children s books in mathematics This book provides reviews for approximately 500 books in mathematics for preschool through grade 6 Each review describes the book s content and accuracy its illustrations and their appropriateness the author s writing style and whether activities for the reader are included Each book is rated in terms of its usefulness in teaching mathematical concepts as highly recommended recommended acceptable or not recommended for mathematical concepts The grade level of each book is included in the bibliographical entry The books have been classified into four main categories with respect to their mathematical content 1 early number concepts 2 number extensions and connections 3 measurement and 4 geometry and spatial sense An overview for each of the categories can be found at the beginning of each section Two indexes list the books by author and by title
