Power Systems Engineering and Mathematics U. G. Knight, 2017-05-17 Power Systems Engineering and Mathematics investigates the application of mathematical aids particularly the techniques of resource planning to some of the technical economic problems of power systems engineering Topics covered include the process of engineering design and the use of computers in system design and operation power system planning and operation time scales and computation in system operation and load prediction and generation capacity This volume is comprised of 13 chapters and begins by outlining the stages in the synthesis of designs or operating states for engineering systems in general as well as some of the mathematical techniques that can be used The

next chapter relates these stages to power system design and operation indicating the principal factors that determine a power system's viable and economic expansion and operation. The problem of choosing the standards for transmission and distribution plants is then considered together with the choice of generation plant mix to meet the total requirement and the sequence of studies and decisions required in system operation. The remaining chapters deal with security assessment, scheduling of a generating plant and the dispatching of generation. This book is intended for engineers and managers in the electricity supply industry, advanced students of electrical engineering and workers in other industries with interest in resource allocation problems.

Multiple Criteria Decision Analysis Salvatore Greco, Matthias Ehrgott, José Rui Figueira, 2016-02-18 In two volumes this new edition presents the state of the art in Multiple Criteria Decision Analysis (MCDA). Reflecting the explosive growth in the field seen during the last several years, the editors not only present surveys of the foundations of MCDA but look as well at many new areas and new applications. Individual chapter authors are among the most prestigious names in MCDA research and combined their chapters bring the field completely up to date. Part I of the book considers the history and current state of MCDA with surveys that cover the early history of MCDA and an overview that discusses the pre-theoretical assumptions of MCDA. Part II then presents the foundations of MCDA with individual chapters that provide a very exhaustive review of preference modeling along with a chapter devoted to the axiomatic basis of the different models that multiple criteria preferences. Part III looks at outranking methods with three chapters that consider the ELECTRE methods, PROMETHEE methods and a look at the rich literature of other outranking methods. Part IV on Multiattribute Utility and Value Theories (MAUT) presents chapters on the fundamentals of this approach, the very well known UTA methods, the Analytic Hierarchy Process (AHP) and its more recent extension, the Analytic Network Process (ANP) as well as a chapter on MACBETH (Measuring Attractiveness by a Categorical Based Evaluation Technique). Part V looks at Non-Classical MCDA Approaches with chapters on risk and uncertainty in MCDA, the decision rule approach to MCDA, the fuzzy integral approach, the verbal decision methods and a tentative assessment of the role of fuzzy sets in decision analysis. Part VI on Multiobjective Optimization contains chapters on recent developments of vector and set optimization, the state of the art in continuous multiobjective programming, multiobjective combinatorial optimization, fuzzy multicriteria optimization, a review of the field of goal programming, interactive methods for solving multiobjective optimization problems and relationships between MCDA and evolutionary multiobjective optimization (EMO). Part VII on Applications selects some of the most significant areas including contributions of MCDA in finance, energy planning problems, telecommunication network planning and design, sustainable development and portfolio analysis. Finally, Part VIII on MCDM software presents well known MCDA software packages.
