

**MARK SCHEME for the October/November 2010 question paper
for the guidance of teachers**

8009 GENERAL PAPER

8009/01

Paper 1, maximum raw mark 50

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

- CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the October/November 2010 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

[Ecosystems as Models for Restoring our Economies, 2nd Edition](#) John H. Giordanengo, 2025-04-01 Emerging from the fields of ecological restoration and economics this interdisciplinary book delivers a clear path to restoring our economies in a way that speaks well to industry groups and business owners students and the general public and to policy makers There are proven relationships between ecology and economics Giordanengo employs those relationships in an

intriguing way and integrates them with global case studies to argue that redesigning economic systems according to ecological principles is necessary to balancing critical social environmental and economic goals For example he reveals how more obscure ecological principles and theories succession evolution diversity productivity curves and so on can inform the restructuring of economic systems that are resilient productive and regenerative A variety of students and practitioners have read the first edition or attended John s seminars only to remark Why haven t we learned this in our traditional coursework or This book brings so much clarity to the fields of sustainability and environmental sciences Traditional approaches to sustainability focus on the social environmental and economic pillars of an economy while paying little attention to the foundation those pillars rest upon A comprehensive focus on our economy s foundational components has been ignored for good reason we have lacked an understanding of what they are or how they interact with one another Cross cutting research between ecological and economic systems reveals three foundational components i e drivers common to both systems The effective management of these components is perhaps the most important obstacle to resolving current tensions between society nature and the global market economy The scale at which diversity energy and trade must be managed is also justified by self regulating ecosystems such as jungles prairies and pine forests That scale is not global nor is it hyper local The economic and ecological rationale agree that the scale of a sustainable economy the natural geography of humans is regional To the contrary the attempt to manage our economy at a global scale has given rise to chronic social environmental and economic symptoms across earth In highly developed countries such as the United States these symptoms include flat real wages and productivity growth a growing wealth gap degraded environmental conditions rising social unrest and more The closing chapters outline a natural path for restoring our economies illuminated by humanities shared experience in ecological restoration The process of ecosystem recovery following disturbance i e succession is one such pathway Unwittingly developed nations such as the United States manage succession to concentrate wealth into fewer hands while lowering the economy s productive capacity net productivity and resistance to future disturbances Economic policies can also move the succession dial toward the productive and diverse center where wealth and resources are recirculated quickly new business opportunities are created and resilience and resistance are fortified a stout shield in the face of global economic turmoil For policymakers consumers and industry groups this book explores root causes of the challenges you face so that you may take deep correct actions to yield lasting change Giordanengo provides critique but goes further with clear steps that individuals businesses communities and policymakers can take to start restoring our economies now From agricultural restoration to regional manufacturing and energy systems he outlines practical strategies and policy mechanisms for building regenerative economies Students will find not just theoretical and systems knowledge but applied economics ecology and conservation centered around actionable pathways Economic restoration is not only possible it is our humanitarian duty

Analysis,1979 **The Economics of Protected Marine Species: Concepts in Research and Management** Kristy Wallmo,Kathryn Bisack,Daniel K. Lew,Dale E. Squires,2016-10-21 Protected marine species have populations that are depleted decreasing or are at risk of extinction or local extirpation As of 2015 The International Union for the Conservation of Nature a global environmental organization lists approximately 737 marine species worldwide that are considered at risk of extinction Many are provided legal protection through national laws requiring research and management measures aimed at recovering and maintaining the species at a sustainable population level Integral to the policy decision process involving the management and recovery of marine species is the consideration of trade offs between the economic and ecological costs and benefits of protection This suggests that economics at its core the study of trade offs has a significant role In the U S a somewhat traditional use of economics in protected species research and management has involved cost minimization or cost effectiveness analyses to help select or prioritize conservation actions Economic research has also provided estimates of public non market benefits of recovering species which can be used in larger management frameworks such as ecosystem based management and coastal and marine spatial planning Inherent in much of this research however are complex biological and ecological relationships in which varying degrees of scientific uncertainty are present Addressing this type of uncertainty can affect the economic outcomes related to protected species For example recent work suggests that increasing scientific precision in biological sampling and models can greatly affect the magnitude of economic benefits to commercial fisheries while other research suggests that public non market benefits of species recovery are sensitive to uncertainty about baseline population estimates Previous research has illustrated the importance of understanding the biological ecological and economic aspects of protected species management and recovery In this research topic we synthesize current protected marine species economic research and expand the discussion on present and future challenges related to protected species economics The series of manuscripts brings together an array of prominent researchers and advances our understanding of the ecological and economic aspects of managing and recovering protected marine species **From an Ethic of Sufficiency to its Policy and Practice in Late Capitalism** Manu V. Mathai,Sylvia Lorek,Wolfgang Sachs,2023-12-13 That the notion of sufficiency is essential for a good life is an idea that enjoys support across many ethical philosophical religious and cultural persuasions This notion reasserted itself in the study of sustainability once modern society reluctantly took cognizance of the limited low entropy energy and matter available for human appropriation There is today therefore a general recognition of i e not necessarily wide agreement on the merits of or needs for notions of sufficiency as a species of environmentalism within secular communities In this context a critical question that invites our attention is how to effect sufficiency and in particular of dealing with the daunting challenge of injustice as well as questions of distribution within and between countries that it brings to attention Given sufficiency s original home as it were in tradition the modern world has tended to dismiss it or to plead to individual voluntary simplicity when faced with evidence asserting its necessity Sufficiency

is also often written away as a spiritual problem The domain of ascetics and the religious How to habilitate sufficiency in a political economy for the secular modern facing its biggest existential challenge yet in the form of the environmental crisis
