Point: A point is a location in space. It is represented by a dot. Points are usually named with an upper case letter. For example, we refer to the following as "point A."

Line: A line is a collection of points that extend forever. The following is a line. The two arrows are used to show that it extends forever.

We put two points in order to name the line as line AF. However, there are an infinite amount of points. You can also name it line FA. **Line segment:** A line segment is part of a line. The following is a segment. A segment has two endpoints. The endpoints in the following segments are A and F. Notice also that the line above has no endpoints.

Ray: A ray is a collection of points that begin at one point (an endpoint) and extend forever in one direction. The following is a ray.

Angle: Two rays with the same endpoint is an angle. The following is an angle.
