

ESSENTIALS OF GEOMETRY

For thousands of years, civilized people have used mathematics to investigate space, shape, and the relationships among physical objects. Ancient Egyptians used geometry to solve many practical problems involving foundations and land areas.

The work of Greek scholars, such as Thales, Euclid, Archimedes, Pythagoras, and Euclid has permeated what has been for the most part geometry in the Western world. Euclid's *Elements* and his followers organized our geometry of the day into a logical system contained in thirteen "books" known today as Euclid's Elements.

Euclid began his Elements with definitions:

- A point is that which has no parts.
- A line is breadthless length.
- The extremities of a line are points.
- A straight line is a line that lies evenly with the points on itself.
- A surface is that which has length and breadth only.

Today mathematicians consider the words point, line, and length not to be considered terms.

Euclid's Elements was all revised, revised in Greek. The study since geometry was revolutionized in that of Dr. Thomas L. Heath.
