Thorp, 2023-10-31 Identification and Ecology of Freshwater Arthropods in the Mediterranean Basin covers the entire Mediterranean basin including parts of Europe Asia Africa and the Mediterranean islands but excluding other biogeographic locations with Mediterranean climates located outside the region The book provides an extensive description of the taxonomy and ecology of aquatic arthropods encountered in lentic and lotic habitats as well as in less studied underground and estuarine habitats It offers expanded taxonomic identification keys to major groups of arthropods with a description of their ecology and distribution Keys for insects include aquatic larval stages and water dwelling adults of Coleoptera and Heteroptera Additional sections focus on taxa that can be encountered in adjacent brackish and estuary ecosystems as long as the taxon primarily occurs in freshwaters This is a much needed comprehensive resource on the taxonomy and ecology of freshwater arthropods with an introduction to recent molecular tools for identifications It will be particularly useful for freshwater ecologists limnologists environmentalists and students in the ecological sciences Presents taxonomic keys to genera and species to the majority of aquatic arthropod families Provides coverage of all freshwater ecosystems of the Mediterranean basin with case studies and examples Includes numerous photographs of the aquatic arthropods described in the chapters Covers the ecology and taxonomy of organisms living in more traditionally studied lakes and streams as well as in less studied underground and estuarine habitats **Climate Change Impacts on Tropical Forests in Central America** Aline Chiabai, 2015-09-25 The loss of biodiversity is a major environmental problem in nearly every terrestrial ecosystem on Earth This loss is accelerating driven by climate change as well as by other causes including agricultural exploitation fragmentation and degradation triggered by land use changes The crucial issue under debate is the impact on the welfare of current and future population and the role of humans in the exploitation of natural resources This is of particular importance in Central America which it is amongst the richest and most threatened biodiversity regions on the Earth and where the loss of ecosystems strongly affects its socio economic vulnerability This book addresses the impacts of climate and land use change on tropical forest ecosystems in this important region and assesses the expected economic costs if no policy action is taken under different future scenarios and for different geographical scales This innovative collection utilises both theoretical approaches and empirical results to provide a conceptual framework for an integrated analysis of climate and land use change impacts on forest ecosystems and related economic effects offering insight into the complex relationship between ecosystems and
