

Figure 7.5 The Cell Cycle

G_2 refers to the second gap in which there is no DNA synthesis. During G_2 , the cell continues to synthesize RNA and proteins, including those for mitosis, and it continues to grow. The end of G_2 marks the end of interphase; mitosis then begins.

G_1 phase is a period of growth before the DNA replicates. The cell makes various RNAs, proteins, and other types of cellular molecules but not DNA (the G in G_1 stands for gap, referring to the absence of DNA synthesis).

If the cell is going to divide, DNA replication begins. During S phase, the cell duplicates each chromosome, including both the DNA and the chromosomal proteins, and it also continues synthesis of other cellular molecules.
