PREVIOUS QUESTION POINT

Directions (1-8): Read the given passage and answer the following questions based on it.

Emissions of carbon dioxide and other greenhouse gases plunged 4.6 percent in 2020, as lockdowns in the first half of the year restricted global mobility and hampered economic activity. Many hoped that this would mark the beginning of a more permanent shift downwards in emissions.

Emissions from the manufacturing and the energy sectors contributed the most to recent global increases based on updated information from the IMF's Climate Change Indicators Dashboard—a joint effort among national and international statistical organizations to provide timely data to help monitor the transition to lower carbon use.

As greenhouse gas emissions from human activities increase, they **build up** in the atmosphere and warm the climate, leading to many other changes around the world—in the atmosphere, on land, and in the oceans. While total emissions have climbed significantly above pre-pandemic levels, increases from transportation and households were more muted last year as the pandemic weighed on global mobility. This was particularly evident with the emergence of the omicron variant in the fourth quarter of last year. The public health policy measures in many countries drove down the emissions of households and of the electricity sector.

It will be important to monitor the emissions of both of these sectors as economies fully reopen in the context of historically high fossil fuel-based energy prices. The Intergovernmental Panel on Climate Change has said that, in the scenarios they assessed, limiting atmospheric warming to the key level of around 1.5 degrees Celsius requires global greenhouse gas emissions to peak by 2025 at the latest, emphasizing that achieving this milestone is

critical. The new data from the dashboard underscore what some who warned time is running out, and we must bend the emissions curve to achieve the reductions to limit atmospheric warming.

Q1. According to the passage, why did gas emissions decrease in 2020?

- (a) Reduced emissions from multiple energy sectors
- (b) The introduction of global policy on greenhouse gas emissions by 2020
- (c) Global mobility restrictions and activity decline due to lockdown
- (d) Increased use of renewable energy
- (e) The emergence of the Omicron variant in the fourth quarter of last year

Q2. How do greenhouse gas emissions warm the climate, as mentioned in the passage?

- (a) They lead to increased atmospheric temperature
- (b) They reduce atmospheric warming
- (c) They cause changes in the atmosphere and oceans
- (d) They only affect the atmosphere
- (e) Their impact on climate is too small to be judged effectively

Q3. What specific role does the IMF Climate Change Indicators Dashboard play, as mentioned in the passage?

- (a) Providing funding for renewable projects
- (b) Monitoring the transition to lower carbon emissions
- (c) Assessing the effectiveness of policy measures
- (d) Predicting future global mobility trends
