Vernikoff, 2021-05-11 Young people who have received special education services in the United States are vastly overrepresented in juvenile and adult criminal justice systems relative to their numbers in the general population. Although much existing research blames individual kids for getting arrested, school level policies and practices affect a variety of student outcomes including involvement with the justice system. These school level policies and practices can and should be altered by teachers, administrators, and policy makers to reduce the number of young people getting arrested. *Disabling the School to Prison Pipeline* uses administrative data from New York City public schools and interviews with young people who have received special education services in NYC public schools and been arrested to better understand how schools can help or harm students receiving special education services. Schools cannot fix all problems associated with the criminal justice system in the United States; however, we can certainly expect schools not to make existing problems worse. This book identifies school level policies and practices that may lead to negative outcomes for students such as getting arrested and suggests alternatives.

*Foundations of Psychological Testing* Leslie A. Miller, Sandra A. McIntire, Robert L. Lovler, 2011. The Third Edition of this text offers a straight forward and clear introduction to the basics of psychological testing as well as to psychometrics and statistics for students new to the field. The authors focus on relating core ideas to practical situations that students will recognize and relate to. They provide a variety of pedagogical tools that promote student understanding of the underlying concepts required to interpret and to use test scores. Primarily concerned with preparing students to become informed consumers and users of tests, the text also features a final section focusing on how tests are utilized in three important settings: education, clinical, and counseling practice and organizations. Intended Audience: This is a scholarly, informative, applicable, and appropriate undergraduate and graduate textbook, ideal for introductory courses such as Psychological Testing, Psychological Tests, and graduate programs in psychology, industrial, organizational psychology, and counseling.

**Changing Urban Education** Clarence Nathan Stone, 1998. With critical issues like desegregation and funding facing our schools, dissatisfaction with public education has reached a new high. Teachers decry inadequate resources while critics claim educators are more concerned with job security than effective teaching. Though urban education has reached crisis proportions, contending players have difficulty agreeing on a common program of action. This book tells why. *Changing Urban Education* confronts the prevailing naivete in school reform by examining the factors that shape, reinforce, or undermine reform efforts. Edited by one of the nation's leading urban scholars.

it examines forces for change and resistance in urban education and proposes that the barrier to reform can only be overcome by understanding how schools fit into the broader political contexts of their cities. Much of the problem with our schools lies with the reluctance of educators to recognize the profoundly political character of public education. The contributors show how urban political contexts vary widely with factors like racial composition, the role of the teachers union, and relations between cities and surrounding metropolitan areas. Presenting case studies of original field research in Baltimore, Chicago, Houston, and six other urban areas, they consider how resistance to desegregation and the concentration of the poor in central urban areas affect education and they suggest how cities can build support for reform through the involvement of business and other community players. By demonstrating the complex interrelationship between urban education and politics, this book shows schools to be not just places for educating children but also major employers and large spenders of tax dollars. It also introduces the concept of civic capacity, the ability of educators and non-educators to work together on common goals, and suggests that this key issue must be addressed before education can be improved. Changing Urban Education makes it clear to educators that the outcome of reform efforts depends heavily on their political context, as it reminds political scientists that education is a major part of the urban mix. While its prognosis is not entirely optimistic, it sets forth important guidelines that cannot be ignored if our schools are to successfully prepare children for the future.

This report on science and mathematics indicators is intended to assist state, national, and local policymakers and educators in making informed decisions. This report focuses on science and mathematics indicators at state and national levels. The indicators are intended for use by policymakers and educators to assess progress in improving mathematics and science education in the schools. The 1997 report presents new state indicators from the 1995-96 school year and examines trends by state from 1990 to 1996 on indicators of student achievement, content, and instruction, and context and conditions for teaching. Indicators were selected through consultation with state education leaders, science and mathematics educators, representatives of national professional organizations, and education researchers.
