improved therapeutic strategies, volume II Jian Ma,Chunjie Jiang,Xuebin Fu,2025-04-30 Given that Volume I of the topic  
Novel Insights into the Pathophysiology of Diabetes related Complications Implications for Improved Therapeutic Strategies  
has been successfully performed last year and we have received submissions talking about diabetic retinopathy DR diabetic  
neuropathy DN type 2 diabetes mellitus T2DM associated periodontitis diabetic oxidative liver damage diabetic related  
wound healing etc We are pleased to announce the launch of Volume II Diabetes mellitus DM as a major health problem has  
been highly prevalent across the globe It is increasingly apparent that not only a cure for the current worldwide diabetes  
epidemic is required but also a cure for its major complications including heart disease chronic kidney disease and nerve  
damage In addition other problems with feet oral health vision hearing reproduction and mental health need to be explored  
as well Understanding the underlying mechanisms of these diabetic complications would be helpful to prevent or delay the  
occurrence of complications and to improve the overall health condition of people with DM Unfortunately current therapies  
only slow down disease deterioration of most prevalent diabetic complications Indeed whether the mechanisms in diabetic  
complications are protective or pathological remains not fully defined based on the impacts during the underlying disease  
process Thus we welcome academic articles that can provide the latest insights into the pathophysiology of diabetes related  
complications These submissions range from uncovering the intracellular signaling pathways with the development of  
diabetic complications to exploring the possible role of genetic issues metabolic regulation and inflammation mechanisms We  
welcome high quality Original Research and Review articles that contribute to the mechanism investigation of a range of  
diabetic complications including but not limited to Microvascular damage related diseases in diabetic patients such as  
neuropathy nephropathy and retinopathy Foot damage and skin problems in diabetes Reproductive disorder in diabetic  
women The relationship between diabetes and the development of Alzheimer s disease depression and cognitive impairment  
In this continued Volume II we are looking forward to seeing many more academic articles on DM related heart disease a  
reproductive disorder in diabetic women or the relationship between diabetes and the development of Alzheimer s disease  
etc Also Methods articles that introduce novel experimental methods or animal models that contribute to understanding the  
formation and progress of diabetic complications are continually welcome Opinions or Perspectives regarding the

implications of new research on the treatment of diabetic complications are encouraged too
