Mechanics and Mathematics of Fluids of the Differential Type D. Cioranescu,V. Girault,K.R. Rajagopal,2016-07-29 This text is the first of its kind to bring together both the thermomechanics and mathematical analysis of Reiner Rivlin fluids and fluids of grades 2 and 3 in a single book Each part of the book can be considered as being self contained The first part of the book is devoted to a description of the mechanics thermodynamics and stability of flows of fluids of grade 2 and grade 3 The second part of the book is dedicated to the development of rigorous mathematical results concerning the equations governing the motion of a family of fluids of the differential type Finally the proofs of a number of useful results are collected in an appendix

Linear Models in the Mathematics of Uncertainty Carol Jones,Mark J Wierman,Terry D Clark,Alex Pham,Michael A. Redmond,2013-02-01 The purpose of this book is to present new mathematical techniques for modeling global issues These mathematical techniques are used to determine linear equations between a dependent variable and one or more independent variables in cases where standard techniques such as linear regression are not suitable In this book we examine cases where the number of data points is small effects of nuclear warfare where the experiment is not repeatable the breakup of the former Soviet Union and where the data is derived from expert opinion how conservative is a political party In all these cases the data is difficult to measure and an assumption of randomness and or statistical validity is questionable We apply our methods to real world issues in international relations such as nuclear deterrence smart power and cooperative threat reduction We next apply our methods to issues in comparative politics such as successful democratization quality of life economic freedom political stability and failed states Finally issues involving deaf and hard of hearing children are explored
