### Global Console Manager

The IBM GCMD appliances integrate digital and analog KVM switching technology with advanced cable management, access for three (3) remote, 1 local or four (4) remote, 1 local or 4 remote simultaneous users, and an intuitive GUI. The appliances have USB and PS/2 ports on the rear panel that support all major target device platforms.

The appliance is a rack-mountable KVM switch, configurable for analog (local) or digital (remote) connectivity. Video resolutions are supported up to 1280x1024 for remote users. The GCMD appliance includes two digital access sets for KVM-over-IP, 1 analog port set for KVM connections, 16 analog rack interface (ARI) ports for connecting CO cables and target devices and virtual media capability for one local user and up to two remote users.

The appliance has user peripheral ports for PS/2 and USB keyboards and mice. Additionally, virtual media such as generic removable media and CD drives can be connected to any one of four USB ports. The appliance works over standard LAN connections. Users can access target devices across a 100BASE-T LAN port that is used to establish an Ethernet connection, or directly through a local port. The IP-based appliance gives you target device control from ANYWHERE in the world.

You can use the following Conversion Option (CO) cables with the appliance:

- **IBM KVM Conversion Option (KCO)** - PS/2 and VGA connectors
- **IBM Virtual Media Conversion Option (VCO)** - USB and VGA connectors, required for virtual media connections—does not support cloning
- **IBM USB Conversion Option (UCO)** - USB and VGA connectors

These intelligent CO cables with CAS design dramatically reduce cable clutter while providing optimal digital display resolution and color settings. The built-in memory of the CO cable simplifies configuration by assigning and retaining unique target device identification codes for each attached target device. This integrated intelligence enhances security and prevents unauthorized access to a target device through cable manipulation. The CO cable is turned on directly from the target device and provides "keep alive" functionality when the appliance is not turned on. The CO cables enable local and remote KVM connectivity to target devices that are attached to the appliance. Each appliance has 16 ARI ports for connecting CO cables.
