Rangarajan K. Sundaran, 1996, "A First Course in Optimization Theory", Cambridge University Press:

Solutions of (some) exercises

Appendix C (pp. 330-347): Structures on Vector Spaces.

1.

$$\begin{aligned} & \frac{1}{4}(\|x+y\|^2 - \|x-y\|^2) = \frac{1}{4}(\langle x+y, x+y \rangle - \langle x-y, x-y \rangle) \\ &= \frac{1}{4}(\langle x, x \rangle + 2\langle x, y \rangle + \langle y, y \rangle - (\langle x, x \rangle - 2\langle x, y \rangle + \langle y, y \rangle)) \\ &= \frac{1}{4}(4\langle x, y \rangle) = \langle x, y \rangle \quad \square \end{aligned}$$

2.

$$\begin{aligned} \|x+y\|^2 + \|x-y\|^2 &= \|x+y\|^2 - \|x-y\|^2 + 2\|x-y\|^2 \\ \text{Polarization Identity} \implies &= 4\langle x, y \rangle + 2\|x-y\|^2 \\ &= 2\langle x, x \rangle + 2\langle y, y \rangle \\ &= 2(\|x\|^2 + \|y\|^2) \quad \square \end{aligned}$$

3. Let's take e.g. \mathbb{R}^2 , $\vec{x} = (1, 0)$ and $\vec{y} = (0, 2)$:

$$\|x+y\|_1^2 + \|x-y\|_1^2 = 3^2 + 3^2 = 18 \neq 10 = 2 \cdot (1^2 + 2^2) = 2(\|x\|_1^2 + \|y\|_1^2) \quad \square$$

First Course In Optimization Theory Solution Manual:

A First Course in Optimization Theory Rangarajan K. Sundaram, 1996-06-13 This book first published in 1996 introduces students to optimization theory and its use in economics and allied disciplines The first of its three parts examines the existence of solutions to optimization problems in R^n and how these solutions may be identified The second part explores how solutions to optimization problems change with changes in the underlying parameters and the last part provides an extensive description of the fundamental principles of finite and infinite horizon dynamic programming Each chapter contains a number of detailed examples explaining both the theory and its applications for first year master s and graduate students Cookbook procedures are accompanied by a discussion of when such methods are guaranteed to be successful and equally importantly when they could fail Each result in the main body of the text is also accompanied by a complete proof A preliminary chapter and three appendices are designed to keep the book mathematically self contained An Introduction to Optimization Edwin K. P. Chong, Stanislaw H. Zak, 1996 This timely and authoritative book fills a growing need for an introductory text to optimization methods and theory at the senior undergraduate and beginning graduate levels With consistently accessible and elementary treatment of all topics An Introduction to Optimization helps students build a solid working knowledge of the field including unconstrained optimization linear programming and constrained optimization Supplemented with more than one hundred tables and illustrations an extensive bibliography and numerous worked out examples to illustrate both theory and algorithms this book also provides a review of the required mathematical background material a mathematical discussion at a level accessible to MBA and business students a treatment of both linear and nonlinear programming an introduction to the most recent developments including neural networks genetic algorithms and the nonsimplex method of Karmarkar a chapter on the use of descent algorithms for the training of feedforward neural networks exercise problems after every chapter MATLAB exercises and examples and an optional solutions manual with MATLAB source listings This book helps students prepare for the advanced topics and technological developments that lie ahead It is also a useful book for researchers and professionals in mathematics electrical engineering economics statistics and business *Functional Differential Equations* Constantin Corduneanu, Yizeng Li, Mehran Mahdavi, 2016-03-25 Features new results and up to date advances in modeling and solving differential equations Introducing the various classes of functional differential equations *Functional Differential Equations Advances and Applications* presents the needed tools and topics to study the various classes of functional differential equations and is primarily concerned with the existence uniqueness and estimates of solutions to specific problems The book focuses on the general theory of functional differential equations provides the requisite mathematical background and details the qualitative behavior of solutions to functional differential equations The book addresses problems of stability particularly for ordinary differential equations in which the theory can provide models for other classes of functional differential equations and the stability of solutions is useful for the

application of results within various fields of science engineering and economics Functional Differential Equations Advances and Applications also features Discussions on the classes of equations that cannot be solved to the highest order derivative and in turn addresses existence results and behavior types Oscillatory motion and solutions that occur in many real world phenomena as well as in man made machines Numerous examples and applications with a specific focus on ordinary differential equations and functional differential equations with finite delay An appendix that introduces generalized Fourier series and Fourier analysis after periodicity and almost periodicity An extensive Bibliography with over 550 references that connects the presented concepts to further topical exploration Functional Differential Equations Advances and Applications is an ideal reference for academics and practitioners in applied mathematics engineering economics and physics The book is also an appropriate textbook for graduate and PhD level courses in applied mathematics differential and difference equations differential analysis and dynamics processes
