

# Intro to Science and Macromolecules

There isn't one way to design an experiment! However, this is the normal sequence:

1. Ask a question
2. Conduct background research
3. Construct a hypothesis
4. Test your hypothesis in an experiment
5. Analyze data
6. Draw conclusions and communicate them

**Independent Variable:** what the experimenter will deliberately change or manipulate in the investigation

- Usually on the x-axis of a graph

**Dependent Variable:** what changes in response to the independent variable

- On the y-axis of a graph
- what is measured

**Experimental Group:** group that is being experimented on. The group where you change the IV

**Control Group:** group used for comparison with your experimental groups. This is the "normal" group.

**Constants:** the aspects of an experiment that are held the same

**Correlation does not equal causation:** measured in the DV is caused only by the IV

## Characteristics of Life
