Emerging Topics in Macroeconomics Richard O. Baily, 2009 This book is devoted to new research on macroeconomics which is a branch of economics that deals with the performance structure and behaviour of a national or regional economy as a whole Along with microeconomics macroeconomics is one of the two most general fields in economics Macroeconomists study aggregated indicators such as GDP unemployment rates and price indexes to understand how the whole economy functions Macroeconomists develop models that explain the relationship between such factors as national income output consumption unemployment inflation savings investment international trade and international finance In contrast microeconomics is primarily focused on the actions of individual agents such as firms and consumers and how their behaviour determines prices and quantities in specific markets While macroeconomics is a broad field of study there are two areas of research that are emblematic of the discipline the attempt to understand the causes and consequences of short run fluctuations in national income the business cycle and the attempt to understand the determinants of long run economic growth increases in national income Macroeconomic models and their forecasts are used by both governments and large corporations to assist in the development and evaluation of economic policy and business strategy *Research in Applied Economics* Mahmoud Abul Eyoum, 2026-02-04 Research in applied economics is not only important to students and researchers to the contrary it is also important for managers business leaders decision makers and even politicians Every research effort is a useful tool for those who are seeking answers A researcher in economics needs to understand both macroeconomics and microeconomics as they represent the core of economics before doing research It is also important for the researcher to build his her methodological and critical thinking and communication skills to be able to conduct research However it is essential that a researcher separate his or her own beliefs and values from the results proved by evidence from research as this will add integrity to the research The researcher should not prejudge the causes before ending the research process and testing its results That is why we always advise students and researchers to be neutral not biased and to be patient not hasty Most students and researchers fail to understand what is written in books on research methodology because those books are generally written in technical language using theoretical approaches To avoid that I tried to draft this book using nontechnical language as much as possible using a direct approach to explain what is needed to be a good researcher Hoping that my approach will guide the readers to understand the basics of research in applied economics Having said all that this book is not about the philosophy of research or the statistical or mathematical research methods to be used it is simply about how to do empirical research in applied economics Therefore the objectives of this book are to introduce the reader to applied economics give him her an overview of how to do research and guide them to know how to plan design implement and draft good research Macroeconomic Policy and Industrial Development Issues II SaKong, 1987
