Economists' Mathematical Manual Knut Sydsaeter, Arne Strøm, Peter Berck, 2011-10-20 This volume presents mathematical formulas and theorems commonly used in economics. It offers the first grouping of this material for a specifically economist audience and it includes formulas like Roy's identity and Leibniz's rule. *Climate Change Effects on Civil Infrastructure* Mohammed M. Ettouney, 2025-03-31 Climate change challenges are unlike any hazard that infrastructure and related shareholders have faced for millennia. These challenges and the systems that are vulnerable to them, as well as the resulting consequences (social, economic, physical, natural, health costs, etc.) are interrelated in countless ways and span regions, countries, oceans, and continents. The design, analysis, maintenance, operations, economics, and life cycle of civil infrastructure are dependent upon climatic effects, and this book addresses the intersections between climate change infrastructures and related decision paradigms such as risk, resilience, preparedness, adaptation, or mitigation from the viewpoint of climate change demands. Presents an objective categorization of climate change demands as related to civil infrastructure and society. Offers a comprehensive roadmap on how to plan for and address climate change effects on civil infrastructure. Includes numerous objective and practical case studies throughout to highlight important subjects.
