Mechanisms of Stress Tolerance in Horticultural Crops: Physiological and Molecular Insights Milan Kumar Lal,Ravinder Kumar,Rahul Kumar Tiwari,Awadhesh Kumar,Abazar Ghorbani,Necla Pehlivan ,Meisam Zargar,2025-09-22 The field of horticultural crop production is increasingly challenged by both abiotic and biotic stressors exacerbated by global climatic changes and anthropogenic activities These stressors including salinity drought temperature extremes and heavy metal contamination significantly impact plant growth yield and quality Horticultural crops exhibit varied responses to these stressors particularly during critical growth phases such as seedling establishment vegetative growth reproductive stages and senescence Recent studies have highlighted the importance of understanding the physiological biochemical and molecular responses of these crops to stress However gaps remain in fully elucidating the resistance mechanisms and mitigation strategies Additionally biotic stressors like viruses fungi bacteria insects and nematodes further compromise crop vigor and productivity The role of biostimulants hormones novel chemicals and microorganisms in enhancing stress tolerance is an emerging area of interest with recent findings pointing to the beneficial effects of phytochemicals secondary metabolites and antimicrobial peptides in stress mitigation *Biology* Kenneth Raymond Miller,Prentice Hall (School Division),1999-02
