

## ABOUT THE STANDARD

- Genetics is another meaty Level 1 Science standard, with lots of definitions to remember and lots of concepts to explain.
- Just like the other standards though, you can break down the standard into three easy parts:
  - **DNA and how it works:** DNA, genes, alleles, chromosomes, genotypes and phenotypes.
  - **Inheritance and variation:** inheritance of alleles/chromosomes, mutations, meiosis, fertilisation, patterns of inheritance, including Punnett squares and pedigree charts.
  - **Reproduction, survival and natural selection:** sexual vs. asexual reproduction, effect on phenotype on survival, and therefore passing down genes/alleles to the next generation, and the importance of variation on survival.
- Use our walkthrough guides to make sure you know the content, and if you take on the strategies we're about to discuss, you'll be able to come out on top.

## EXAM STRATEGIES

- Succeeding in genetics, and in Biology in general, is based on understanding the definitions of key phrases.
  - Fortunately, NZQA have written a list of words you **MUST** know.
  - You must be familiar with the following words and phrases:
    - Gene, allele, mutation, genotype, phenotype, gamete, zygote, dominant, recessive, homozygous, heterozygous, pure breeding, Punnett square, and pedigree chart.
- Not only that, but there's usually a question based around the relationship between DNA, genes, alleles, chromosomes, genotype and phenotype. Luckily, we're here to help you out:
  - Remember that DNA is the (molecule) that carries the genetic code/ information and can be passed down to the next generation.
  - Along the DNA, base sequences provide the code for building different proteins, which then determine particular features
  - A gene is a section of DNA that codes for a particular trait – e.g. fur colour
  - Alleles are different forms a gene can take, or you can think about it as the specific base sequence, e.g. *W* could be the allele for white fur and *w* could be the allele for brown fur
  - Genotype is the allele combination present for a particular gene, e.g. *Ww* for the fur colour gene, and the phenotype is the physical appearance of a trait e.g. white or brown fur.
  - If you know all of these definitions and can link them together, you'll be right on track for success!
- This standard is also all about variation, which is all about the differences individuals can have in their genetic makeup.
- One of the main ways of gaining genetic variation is mutation. A mutation is a change in the DNA base sequence, which means a different protein is made, and so therefore a different phenotype is produced.
  - Mutations are important because it results in the production of a new allele.
