Current Progress in Genomic and Genetic Research on Human Viral Diseases Binhua Liang, Birte Möhlendick, Hezhao Ji, Xiang Gao, 2024-04-26 Viral diseases pose a severe threat to public health globally with many pathogenic viruses circulating and many more might be yet to emerge. Viral infections have become an inevitable event in our daily lives; however, people may not know much about their causal pathogens. The ongoing pandemic of the coronavirus disease 2019 (COVID-19) raises another alarm that our fight against viral pathogens is far from ending and our understanding of the complex interactions between the viral invaders and the human host remains limited.

Aquacultural Genetics and Breeding, 1988 **Aquacultural Genetics and Breeding** Graham A. Gall, 1997-07 Identifies critical research needs in aquacultural genetics through evaluation of current research activities, evaluation of the capabilities of institutions to address research needs, and examination of institutional infrastructure related to research training, funding, and leadership. Past work in the field is summarized and topics are categorized into general areas of genetic research. Recommendations are made to enhance aquacultural production through genetic improvement of stock and implementation of advanced breeding methods, providing the framework for new initiatives in government and industry.

Quality Issues in Clinical Genetic Services Ulf Kristoffersson, Jörg Schmidtke, J. J. Cassiman, 2010-06-25 Initially, genetic disorders were all considered as rare diseases. At present, in the mid of 2009, the OMIM catalogue contains information on more than 12 000 entries, of which about 2500 are available for clinical testing based on the identification of the responsible gene defect. However, altogether, it has been estimated that about 8 percent of a population in the economically developed countries will during their lifetime suffer from a disease, mainly as the result of their genetic constitution. Adding to that, it is estimated that all diseases have a genetic component which will determine who will be at a higher than average risk for a certain disorder. Further, it is postulated that in the near future, this genetic profiling could become useful in selecting an appropriate therapy adapted to the genetic constitution of the person. Thus, genetic disorders are not rare. Measuring quality of health care related processes became an issue in the 1990s, mainly in laboratory medicine but also for hospitals and other health care systems. In many countries, national authorities started to implement recommendations, guidelines, or legal procedures regulating quality of health care delivery. In laboratory medicine, in parallel, the use of accreditation as a method assuring high quality standards in testing came in use. With the increasing possibilities of performing molecular genetic testing, genetic laboratories needed to become involved in this process. As many genetic disorders are rare, most laboratories worldwide offered analysis for a specific set of disorders, and therefore, very early on, a transborder flow of samples occurred. While international quality criteria (ISO) have been in existence for a number of years, the regulation of quality issues still may differ between countries. Based on their personal experience in the varying fields of quality research and clinical implementation of quality criteria in genetic services, the authors of this book share their experience and give examples of the implementation of quality issues in national quality

systems worldwide This book which is the result of the effort of many persons is destined to aid laboratory managers and counsellors health care managers and other stakeholders in national or international health care service to improve the services to the benefit of patients with suspected genetic disorders
