Biomimicry Janine M. Benyus, 2009-08-11 Repackaged with a new afterword this valuable and entertaining New York Times Book Review book explores how scientists are adapting nature's best ideas to solve tough 21st century problems Biomimicry is rapidly transforming life on earth Biomimics study nature's most successful ideas over the past 3.5 billion years and adapt them for human use The results are

revolutionizing how materials are invented and how we compute heal ourselves repair the environment and feed the world Janine Benyus takes readers into the lab and in the field with maverick thinkers as they discover miracle drugs by watching what chimps eat when they re sick learn how to create by watching spiders weave fibers harness energy by examining how a leaf converts sunlight into fuel in trillionths of a second and many more examples Composed of stories of vision and invention personalities and pipe dreams Biomimicry is must reading for anyone interested in the shape of our future **Biologically Inspired Computer Vision** Gabriel Cristobal,Laurent Perrinet,Matthias S. Keil,2015-08-31 As the state of the art imaging technologies became more and more advanced yielding scientific data at unprecedented detail and volume the need to process and interpret all the data has made image processing and computer vision increasingly important Sources of data that have to be routinely dealt with today s applications include video transmission wireless communication automatic fingerprint processing massive databanks non weary and accurate automatic airport screening robust night vision just to name a few Multidisciplinary inputs from other disciplines such as physics computational neuroscience cognitive science mathematics and biology will have a fundamental impact in the progress of imaging and vision sciences One of the advantages of the study of biological organisms is to devise very different type of computational paradigms by implementing a neural network with a high degree of local connectivity This is a comprehensive and rigorous reference in the area of biologically motivated vision sensors The study of biologically visual systems can be considered as a two way avenue On the one hand biological organisms can provide a source of inspiration for new computational efficient and robust vision models and on the other hand machine vision approaches can provide new insights for understanding biological visual systems Along the different chapters this book covers a wide range of topics from fundamental to more specialized topics including visual analysis based on a computational level hardware implementation and the design of new more advanced vision sensors The last two sections of the book provide an overview of a few representative applications and current state of the art of the research in this area This makes it a valuable book for graduate Master PhD students and also researchers in the field

**Biologically Inspired Networking and Sensing: Algorithms and Architectures** Lio, Pietro,Verma, Dinesh,2011-08-31 Biologically Inspired Networking and Sensing Algorithms and Architectures offers current perspectives and trends in biologically inspired networking exploring various approaches aimed at improving network paradigms Research contained within this compendium of research papers and surveys introduces researches in the fields of communication networks performance modeling and distributed computing to new advances in networking **Bio-Inspired Engineering** Christopher H. M. Jenkins,2011-12-05 More and more the patterns and scientific principles of natural living systems are being mimicked and exploited in man made engineered systems and products That trend is now starting to appear in the curricula design of engineering schools This will be the first broad based introduction to the influence of nature and biological systems in how things are designed and made from new design paradigms and structural systems to self

healing materials and smart systems and robotics Presented as a traditional textbook with accompanying Solutions and Instructor s Manuals it will offer both students and professionals new to the subject a window into the new world of engineering The reader will find A general overview of the relationship between living systems and engineering and how biosystems can and do affect engineering design from structural materials to thermal fluid behavior to systems engineering Applications of bio systems to robotics and biomedical engineering End of chapter problems and exercises to reinforce design concepts and expand understanding

**Bio-Inspired Models for Natural and Formal Languages** Gemma Bel-Enguix,M. Dolores Jiménez-López,2011-01-18 This volume is a collection of papers written by several researchers that have in common the use of bio inspired models to approach formal and natural languages The main goal of the volume is to promote interdisciplinarity among linguistics biology and computation The area of convergence between these three disciplines is giving rise to the emergence of new scientific paradigms that will have an epistemological social and cultural impact The book is organized around three thematic areas Every area relates two of the three main topics language computation and biology This volume stands out from existing publications because of its interdisciplinary nature There has been a long tradition of interchanging methods among the aforementioned three disciplines but it is difficult to find a single volume where this interchange of methods is shown The volume includes chapters that clearly illustrate these interdisciplinary approaches and their benefits This book will be of value to specialists who work in linguistics biology or computation and have interest in using methods from other disciplines that can provide new ideas new tools and new formalisms to approach their problems and that can help in the improvement of their theories and models
