the workflow at which science ready datasets are available Though there have been many individual projects on dynamic  
maps and online GISs in which coding and data processing are given precedence over cartographic principles cartography is  
more than just processing and displaying spatial data However there are currently no textbooks on this rapidly changing field  
and methods tend to be shared informally Addressing this gap in the literature the respective chapters outline many topics  
pertaining to cartography and mapping such as the role and definition of planetary cartography and vs Geographic
