Switched-Capacitor DC-DC Converters Nicolas Butzen,Michiel Steyaert,2020-07-03 This book gives a detailed analysis of switched capacitor DC DC converters that are entirely integrated on a single chip and establishes that these converters are mainly limited by the large parasitic coupling the low capacitor energy density and the fact that switched capacitor converter topologies only have a fixed voltage conversion ratio The authors introduce the concept of Advanced Multiphasing as a way to circumvent these limitations by having multiple out of phase parallel converter cores interact with each other to minimize capacitor charging losses leading to several techniques that demonstrate record efficiency and power density and even a fundamentally new type of switched capacitor topology that has a continuously scalable conversion ratio Provides single source reference to the recently developed Advanced Multiphasing concept Enables greatly improved performance and capabilities in fully integrated switched capacitor converters Enables readers to design DC DC converters where multiple converter cores are put in parallel and actively interact with each other over several phases to improve their capabilities

Rebounding Marine Mammal Species and Conservation Recovery Challenges Andrea Bogomolni, Kristina Cammen,Jennifer Jackman,2025-03-19 Marine mammals have been valued for millennia for their cultural significance and more often their exploitative resource value Many large whale species remain imperilled or are only recently returning from

the brink of extinction In contrast recent conservation measures have allowed for the successful rebound and recovery of many cetaceans and pinniped species some to the point of perceived overabundance whether referring to 1 200 Hawaiian monk seals or 7 million harp seals In addition to their continued intrinsic value alive and thriving today we also appreciate the value of marine mammal species to ecosystem health Yet as we grapple with a lack of historical baselines and uncertain ecological and social carrying capacities several conflicts are emerging at the growing interface between humans and marine mammals These conflicts include ship strikes depredation bycatch impacts of ecotourism competition for resources changing cultural values and political challenges to marine mammal conservation Despite the emergence of theory and application of human dimensions of wildlife in the terrestrial realm the rebound of marine mammals and how we address these conflicts in the coastal and ocean environment are often overlooked when discussing human wildlife conflict issues and solutions This Research Topic aims to increase awareness of these issues to advance the discussion on how we can address these challenges in ocean systems Conflicts with rebounding populations of marine mammals have emerged across diverse ecological sociological economic and political contexts Conflicts often arise from assessing how marine mammals fit into the human world based on the baseline understanding of one s own personal experiences or specific community contexts rather than broader and complex ecosystems understanding or historical context How do we address these emerging complex socio ecological problems related to marine mammals Who defines the problems and how are the problems defined How do we consider often opposing values and interests in the development of solutions and how do we engage diverse stakeholders in decision making processes that shape how we will manage and coexist with marine mammal populations for generations to come How can different disciplines help build the knowledge foundation and strategies necessary to address these challenges
