Kulweic, 1991-01-16 Sponsored jointly by the American Society of Mechanical Engineers and International Material Management Society this single source reference is designed to meet today's need for updated technical information on planning installing and operating materials handling systems It not only classifies and describes the standard types of materials handling equipment but also analyzes the engineering specifications and compares the operating capabilities of each type Over one hundred professionals in various areas of materials handling present efficient methods procedures and systems that have significantly reduced both manufacturing and distribution costs **Linear Programming and Its Applications** James K. Strayer, 2012-12-06 Linear Programming and Its Applications is intended for a first course in linear

programming preferably in the sophomore or junior year of the typical undergraduate curriculum The emphasis throughout the book is on linear programming skills via the algorithmic solution of small scale problems both in the general sense and in the specific applications where these problems naturally occur The book arose from lecture notes prepared during the years 1985-1987 while I was a graduate assistant in the Department of Mathematics at The Pennsylvania State University I used a preliminary draft in a Methods of Management Science class in the spring semester of 1988 at Lock Haven University Having been extensively tried and tested in the classroom at various stages of its development the book reflects many modifications either suggested directly by students or deemed appropriate from responses by students in the classroom setting My primary aim in writing the book was to address common errors and difficulties as clearly and effectively as I could

Supply Chain Engineering
Marc Goetschalckx, 2011-08-11 The focus of Supply Chain Engineering is the engineering design and planning of supply chain systems There exists a very large variety of supply chain system types all with different goals constraints and decisions but a systematic approach for the design and planning of any supply chain can be based on the principles and methods of system engineering In this book author Marc Goetschalckx presents material developed at the Georgia Tech Supply Chain and Logistics Institute the largest supply chain and logistics research and education program in the world The book can be roughly divided into four sections The first section focuses on data management Since most of planning and design requires making decisions today so that supply chain functions can be executed efficiently in the future this section introduces forecasting principles and techniques The second section of the book focuses on transportation systems First the characteristics of transportation assets and infrastructure are shown Then four chapters focus on the planning of transportation activities depending on who controls the transportation assets The third section of the book is focused on storing goods and the last section of the book is focused on supply chain systems that consider simultaneously procurement production and transportation and inventory as well as the design of the supply chain infrastructure or network design In each chapter first a model of the process being studied is developed followed by a description of practical solution algorithms

More advanced material is typically described in appendices This makes it possible to use an integrated breath first treatment of supply chain systems by using the initial material in each chapter A more in depth treatment of a specific topic or process can be found towards the end of each chapter End of chapter exercises are included throughout This text is suitable for several target audiences The first target is a course for upper level undergraduate students on supply chains The second target is the use in a capstone senior design project in the supply chain area The third target is an introductory course on supply chains either in a master of engineering or a master of business administration program and the final audience consists of students attending logistics or supply chain post graduate or continuing education courses
