**Demonstration of a Free Piston Stirling Engine Driven Linear Alternator System** Steven J. Piller,1978

**Demonstration of a Free Piston Stirling Engine Driven Linear Alternator, Phase I Report** ,1977 The results of the work performed under Phase I of the free piston Stirling engine demonstrator program are described The objective of the program is to develop a 2 kW free piston Stirling engine linear alternator energy conversion system for an isotopic heat source with a greater than 30% overall efficiency Phase I was a 15 month effort to demonstrate the feasibility of the system through analysis and experimental testing of the individual components An introduction to Stirling engines and the details of the tasks completed are presented in five major sections 1 introduction to Stirling engine 2 preliminary design of an advanced free piston Stirling demonstrator engine 3 design and test of a 1 kWE output linear alternator 4 test of a model free piston Stirling engine and 5 development of a free piston Stirling engine computer simulation code **Demonstration of a**

load This conclusion is not substantially altered when the usually lesser masses of the magnets and of any capacitors are added Within the reported stability requirements and under circumstances of normal materials ratings this study finds no clear advantage to capacitive tuning Comparative plots of the various constituent masses are presented versus the internal power factor taken as a design degree of freedom The explicit formulas developed for stator core coil capacitor and magnet masses and for the degree of magnet utilization provide useful estimates of scaling effects Niedra Janis M Unspecified Center
