emerged as an important area of both academic and deployed research. It encompasses a broad range of research that will enable personalized adaptive hypermedia systems to play an even more effective role in people's lives. The Web has enabled the widespread use of many personalized systems such as recommenders, personalized filters, and retrieval systems, e-learning systems, and various forms of collaborative systems. Such systems have been widely deployed in diverse domains such as e-Commerce, e-Health, e-Government, digital libraries, personalized travel planning, as well as tourist and cultural heritage services. They are particularly promising for users with special needs. The exciting possibilities of such deployed adaptive hypermedia systems rely on research progress in a broad range of areas such as user profiling and modeling, acquisition, updating, and management of user models, group modeling, and community-based profiling, recommender systems, and recommendation strategies, data mining for personalization, the Semantic Web, adaptive multimedia content authoring and delivery, ubiquitous computing environments, and Smart Spaces, personalization for the plethora of mobile devices such as PDAs, mobile phones, and other hand-held devices, and pragmatics such as privacy, trust, and security. Empirical studies of adaptive hypermedia and Web systems are also critical to informing future directions. The

Adaptive Hypermedia conferences have become the major forums for the scientific exchange and presentation of research results on adaptive hypermedia and adaptive Web-based systems. *Mobility Patterns, Big Data and Transport Analytics* Constantinos Antoniou, Loukas Dimitriou, Francisco Pereira, 2026-03-27 *Mobility Patterns, Big Data and Transport Analytics: Tools and Applications for Modeling*, Second Edition provides a guide to the new analytical framework and its relation to big data, focusing on capturing, predicting, visualizing, and controlling mobility patterns, a key aspect of transportation modeling. The book features prominent international experts who provide overviews on new analytical frameworks, applications, and concepts in mobility analysis and transportation systems. Fields covered are evolving rapidly, and this new edition updates existing material and provides new chapters that reflect recent developments in the field, such as the emergence of active transfer and reinforcement learning. Users will find a detailed mobility structural analysis and a look at the extensive behavioral characteristics of transport, observability requirements, limitations for realistic transportation applications, and transportation systems analysis that are related to complex processes and phenomena. This book bridges the gap between big data, data science, and transportation systems analysis with a study of big data's impact on mobility and an introduction to the tools necessary to apply new techniques. Guides readers through the paradigm-shifting opportunities and challenges of handling Big Data in transportation modeling and analytics. Covers current analytical innovations focused on capturing, predicting, visualizing, and controlling mobility patterns while discussing future trends. Delivers an introduction to transportation-related information advances, providing a benchmark reference by world-leading experts in the field. Features a companion website with videos showing analyses performed, as well as test codes and data sets, thus allowing readers to recreate and apply highlighted techniques to their own data. **Kiplinger's Personal Finance**, 2008-06 The most
