Assessment of engineering solutions for solid waste removal from irrigation canals in North Lebanon Salman, M., Pek, E., Simongini, C., Bizri, Y., El-Korek, N., Lucca, E., 2021-02-26 Waste management in Lebanon is a significant issue anticipating cascading and spill over effect on livelihood environment and agriculture North Lebanon has been experiencing population growth spurts due to humanitarian crises in neighbouring countries that contributes to the urgency of finding sustainable solutions Adequate delivery of response measures is beyond the capacities of local authorities Consequently waste crisis has reached its historical peaks It is unlikely that upcoming years can bring radical shifts related to the trends in rapidly increasing waste generation However the seemingly uncontrollable mechanisms should not lead to inaction but concentrated efforts should be stepped up to eliminate harmful consequences The project Rehabilitation and waste management of El Bared Canal Irrigation System to reduce source to sea pollution and improve livelihoods in the Akkar Region of Lebanon financed by the Government of Norway has been formulated to ensure minimal discharges of waste from El Bared System to the Mediterranean Sea thus improving the livelihoods of the people depending on the system through irrigation canal system rehabilitation solid waste disposal and improved agricultural output and job creation Applying a pilot approach the project mainly focuses on Akkar irrigation scheme to introduce both hard investment and soft measures in response to the waste crisis Following a multi criteria assessment approach the current report maps waste removal technologies and provides recommendations on their functions and suitability in the context of the target area Based on broader understanding of the feasibility it helps come to a decision on technology selection      **Trash Control Structures and Equipment** Tony Lee Wahl, 1992      Urban Stormwater Victorian Stormwater Committee, 1999-10-28 The intense concentration of human activity in urban areas leads to changes in both the quantity and quality of runoff that eventually reaches our streams lakes wetlands estuaries and coasts The increasing use of impervious surfaces designed to provide smooth and direct pathways for stormwater run off has led to greater runoff volumes and flow velocities in urban waterways Unmanaged these changes in the quantity and quality of stormwater can result in considerable damage to the environment Improved environmental

performance is needed to ensure that the environmental values and beneficial uses of receiving waters are sustained or enhanced Urban Stormwater Best Practice Environmental Management Guidelines resulted from a collaboration between State government agencies local government and leading research institutions The guidelines have been designed to meet the needs of people involved in the planning design or management of urban land uses or stormwater drainage systems They provide guidance in ten key areas Environmental performance objectives Stormwater management planning Land use planning Water sensitive urban design Construction site management Business surveys Education and awareness Enforcement Structural treatment measures Flow management Engineers and planners within local government along with consultants to the development industry should find the guidelines especially useful Government agencies should also find them helpful in assessing the performance of stormwater managers While developed specifically for application in Victoria Australia the information will be of value to stormwater managers everywhere
