*and Exploitation of Minerals for Green Technologies* M. Smelror,K. Hanghøj,H. Schiellerup,2023-06-21 Raw materials have  
been essential in the development of all human societies through history and moving into a greener more carbon lean future  
we become increasingly reliant on access to a growing number of raw materials Minerals for new technologies improving the  
quality of our lives and the environment are the building blocks of the new Green Stone Age This Special Publication presents  
ongoing research and mapping programmes focusing on minerals needed for the transformation to greener societies In  
addition to new exploration models and shared geological information on the different prospective currently mined areas the  
notion of criticality in different countries is discussed and examples of ongoing national and cross country research and  
mapping programmes are presented In addition to the resource reserve and technical economic aspects the social and  
environmental dimensions are also a focus in some of the contributions as holistic approaches to the exploration and  
exploitation of critical minerals and materials are needed to fulfil the green transition and goals for the Green Stone Age

Hargitai,2019-02-22 This book approaches geological geomorphological and topographical mapping from the point in the  
workflow at which science ready datasets are available Though there have been many individual projects on dynamic maps  
and online GISs in which coding and data processing are given precedence over cartographic principles cartography is more  
than just processing and displaying spatial data However there are currently no textbooks on this rapidly changing field and  
methods tend to be shared informally Addressing this gap in the literature the respective chapters outline many topics  
pertaining to cartography and mapping such as the role and definition of planetary cartography and vs Geographic  
Information Science theoretical background and practical methodologies in geological mapping science ready versus public  
ready products a goal procedure focused practical manual of the most commonly used software in planetary mapping which  
includes generic ArcGISand its extensions JMARS and specific tools HiView Cratertools etc extracting topographic  
information from images thematic mapping climate geophysics surface modeling change detection landing site selection

shared maps dynamic maps on the web planetary GIS interfaces crowdsourcing crater counting techniques irregular bodies geological unit symbology mapping center activities and web services All chapters were prepared by authors who have actually produced geological maps or GISs for NASA the USGS DLR ESA or MIIGAIAK Taken together they offer an excellent resource for all planetary scientists whose research depends on mapping and for students of astrogeology **1980 Ford**
