## **Limits To Growth The 30 Year Update:**

*Limits to Growth* Donella Meadows, Jorgen Randers, Dennis Meadows, 2004-06-01 A pioneering work of science Business Insider This book helped launch modern environmental computer modeling and began our current globally focused environmental debate a scientifically rigorous and credible warning The Nation In 1972 three scientists from MIT created a computer model that analyzed global resource consumption and production Their results shocked the world and created stirring conversation about global overshoot or resource use beyond the carrying capacity of the planet Now preeminent environmental scientists Donella Meadows Jorgen Randers and Dennis Meadows have teamed up again to update and expand their original findings in *The Limits to Growth The 30 Year Global Update* Meadows Randers and Meadows are international environmental leaders recognized for their groundbreaking research into early signs of wear on the planet Citing climate change as the most tangible example of our current overshoot the scientists now provide us with an updated scenario and a plan to reduce our needs to meet the carrying capacity of the planet Over the past three decades population growth and global warming have forged on with a striking semblance to the scenarios laid out by the World3 computer model in the original *Limits to Growth* While Meadows Randers and Meadows do not make a practice of predicting future environmental degradation they offer an analysis of present and future trends in resource use and assess a variety of possible outcomes In many ways the message contained in *Limits to Growth The 30 Year Update* is a warning Overshoot cannot be sustained without collapse But as the authors are careful to point out there is reason to believe that humanity can still reverse some of its damage to Earth if it takes appropriate measures to reduce inefficiency and waste Written in refreshingly accessible prose *Limits to Growth The 30 Year Update* is a long anticipated revival of some of the original voices in the growing chorus of sustainability *Limits to Growth The 30 Year Update* is a work of stunning intelligence that will expose for humanity the hazy but critical line between human growth and human development

**Limits to Growth** Donella H. Meadows, Jorgen Randers, Dennis Meadows, 2005-01 In 1972 four young scientists at MIT wrote a book called *The Limits to Growth* that shocked the world and became an international best seller Using the World3 computer model the authors looked into the future and sounded an alarm for the first time showing the consequences of unchecked growth on a finite planet Their book gained worldwide attention and became the cornerstone of a global debate on how to achieve a sustainable future Twenty years later the authors wrote *Beyond the Limits* a follow up volume that showed humanity was already overshooting Earth's limits *Beyond the Limits* again provoked a national debate and galvanized the scientific and environmental academics leaders to incorporate *Limits to Growth* into the core environmental studies curriculum Now *Limits to Growth The 30 Year Update* brings data on overshoot and global ecological collapse to the present moment It provides a short course in the World3 computer model types of growth and the various kinds of overshoot likely to occur in the current century While it remains to be seen whether public policy will respond effectively and in time to problems such as climate change this book

makes a compelling case for the vital need for a Sustainability Revolution The CD This disc is intended for serious students of Limits to Growth The 30 Year Update It permits users to reproduce and examine the details of the ten scenarios published in the book The CD can be run on most Macintosh and PC operating systems With it you will be able to Reproduce the three graphs for each of the scenarios as they appear in the book Graph the eleven individual parameters for each scenario Create comparative plots to examine the behavior of one parameter under the assumptions for two or more scenarios Print out 47 key variables in five year increments from 1900 to 2100 for any of the scenarios The CD also includes Full model equations compatible with STELLA Eighty five JPEG files of the important book illustrations for use in lectures and classroom discussions
