Linde Hydraulic Control (LHC)

Digital electro-hydraulic controller

Introduces a series of advanced features for the most control technology, through a hydraulic controller, a compact electronic controller equipped with a very powerful microcontroller performs all control functions for the drive unit and the working hydraulics (2).

Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive systems. To save fitting time, pre-wired kits are offered, each with cable harness and a coding that already identifies the truck.

Troubleshooting

The presence of the electronic control unit enables diagnosis via light signals. The electronic diagnostic digital module can quickly access, and display in color, messages on the working hydraulics on the mast and chassis. In addition, the control unit accumulates a variety of messages according to the user's layout selected:

- Working light flashes
- Flashing indicator of the internal controller signal
- The mast raises and automatically descends and all the lights flash
- The mast lowers in the emergency function, the internal controller signal flashes off
- An error code appears on display

These functions can be activated by switching off the controller signal with the key switch. During a repair, the control unit always indicates the error in both panels. If the error is no longer present, the truck returns normal operation. If the error persists, the error code response on the display will one of the messages below during a call-out.

Changing the controller

⚠ Attention
 Possible hydraulic component damage due to electrolytic discharge. Irreparable damage to working hydraulics will occur if the controller is changed.

The controller is equipped with a "float plug" which is attached to the back to avoid electrolysis. Connections must never be left open. The upper part number and the software version of the controller can be read out via the back connector.

⚠ Warning

If the controller is replaced, the pre-wired spare part controller must be identified and may adapted to the cable harness. All necessary information is available on the code browser.
