Sensor Networks Gianluigi Ferrari, 2010-03-10 The idea of this book comes from the observation that sensor networks represent a topic of interest from both theoretical and practical perspectives The title underlines that sensor networks offer the unique opportunity of clearly linking theory with practice In fact owing to their typical low cost academic researchers have the opportunity of implementing sensor network testbeds to check the validity of their theories algorithms protocols etc in reality Likewise a practitioner has the opportunity of understanding what are the principles behind the sensor networks under use and thus how to properly tune some accessible network parameters to improve the performance On the basis of the observations above the book has been structured in three parts Part I is denoted as Theory since the topics of its three chapters are apparently detached from real scenarios Part II is denoted as Theory and Practice since the topics of its three chapters although theoretical have a clear connection with specific practical scenarios Part III is denoted as Practice since the topics of its three chapters are clearly related to practical applications

person and remote participation In total authors of accepted papers have academic and industry affiliations in 15 countries We finally selected 24 papers for presentation during the conference technical sessions A small number of papers were assigned a shepherd from the TPC to assist in paper revision These statistics represent an acceptance rate of just under 24% comparable to that of previous years The TPC also identified several papers that reflect particularly promising early results these papers were selected for presentation as work in progress papers and are identified as such in the proceedings
