Principles and Practice of Constraint Programming, 1999 *Linear Optimization and Extensions* Dimitris Alevras, Manfred W. Padberg, 2001. Books on a technical topic like linear programming without exercises ignore the principal beneficiary of the endeavor of writing a book, namely the student who learns best by doing course. Books with exercises, if they are challenging or at least to some extent, so exercises of need a solutions manual so that students can have recourse to it when they need it. Here we give solutions to all exercises and case studies of M. Padberg's *Linear Optimization and Extensions* second edition. Springer Verlag Berlin 1999. In addition we have included several new exercises and taken the opportunity to correct and change some of the exercises of the book. Here and in the main text of the present volume the terms book text etc designate the second edition of Padberg's LPbook and the page and formula references refer to that edition as well. All new and changed exercises are marked by a star in this volume. The changes that we have made in the original exercises are inconsequential for the main part of the original text where several of the exercises especially in Chapter 9 are used on several occasions in the proof arguments. None of the exercises that are used in the estimations etc have been changed.
