**Notes**

Read the following section highlights. Then, in your own words, write the highlights in your ScienceLog.

- Enzymes in your eyes, nose, and mouth kill most pathogens that try to enter. Other pathogens are washed down the throat and destroyed in the stomach.
- Dead skin cells and oil help to keep germs out of the body.
- When pathogens get into your blood or tissues, the immune system reacts.
- Macrophages engulf pathogens. Macrophages then display parts of the pathogens called antigens on their surface.
- Macrophages activate helper T cells. The helper T cells put the killer T cells and B cells to work.
- Killer T cells kill infected cells. B cells make antibodies.
- Antibodies cling to antigens and attract macrophages and other cells. Special proteins kill pathogens with antibodies stuck to them.
- Macrophages cause fever, which speeds the division of T cells and B cells.
- Memory B cells stand ready to produce more B cells that make antibodies if the pathogen appears again.

**SECTION 3****Vocabulary**

In your own words, write a definition for each of the following terms in the space provided.

1. allergy \_\_\_\_\_
