Class A surfacing is to produce mathematical surfaces to the most exacting standard. Once completed, the A Class surface is the final output of styling design. These surfaces are the Master for making the tools that produce the product itself. Class A surfacing is one of the most complex and tedious 3D computer modeling tasks you can do. Class A surface development occurs in the final phase of a project when constraints are much tighter to adhere to. Modeling under these conditions is very hard without adoption of certain surface basics rules. 3D computer modeling is still based on the knowledge and skill set of the individual user. Therefore, productivity and surface quality is user dependent. The surfacing task can begin from the scan of a physical model as in this tutorial, but it can also start from 2D sketch or verbal input. In most cases, it is the continuation of a concept 3D digital model. Most of the time, you will also need to be aware of and include flanges, draft angles, tool split lines, and other engineering constraints. In the tutorial, these are not included. To include them would put even more constraints on the modeling surfacing itself. This tutorial demonstrates only one small part of class A surfacing, but a very important element of creating good quality surfaces. When you are starting a project or a part, always take some time to think how you will build this before you start. It is not a good idea to rush in the beginning of a project. To be successful and to achieve that right quality in the time given, you need a strategy. Without this, you can find yourself in a corner from which you can never escape a dead end. These points below are, in my opinion, the most important basic rules to succeed. It is very important to have a strategy on methodology, surface layout, and surface construction. Always try to build the surfaces to allow easy modification. Keep the surfaces as simple as possible. Always try to build to an intersection. By following these basic rules, you have come a long way to succeeding in your modeling. Good luck.

**Architectural Modeling & Rendering with AutoCAD R13 and R14** Branko Kolarevic, 1998 Everything architects need to master AutoCAD's exciting modeling and rendering features. When it comes to modeling and rendering with AutoCAD R13 and R14, this user-friendly book/CD package makes it easy to generate outstanding results. While it equips AutoCAD novices with the knowledge and skills required to create polished architectural drawings, models, and renderings, it also offers experienced AutoCAD users the information they need to use all of the program's outstanding new modeling, rendering, and animation features. Rather than just explaining how the software works, Branko Kolarevic guides you step by step through increasingly complex exercises built around Andrea Palladio's Renaissance masterpiece, Villa Rotonda. Coverage is divided into four sections covering 2-D drawing, 3-D modeling, rendering, and animation. Each section begins with an introduction to key theoretical concepts, followed by a series of skill-building tutorials demonstrating these principles in action. To help shorten the AutoCAD learning curve even further, the enclosed CD-ROM provides a library of all of the drawing, modeling, rendering, and animation steps detailed in the book. The CD is flexibly designed to allow users the freedom to focus on the supplied tutorials or to create their own designs based on the techniques described in the book. Together, this book and the accompanying CD-ROM give architects and students the ability to explore the full potential of the most popular architectural CAD software in use today. **THE Journal**, 1995 **The Software Encyclopedia**, 1997 Data Sources, 2000
