

# Huygens' principle

Huygens' principle applied to both plane and spherical waves

Each point on the wave front  $AA'$  can be thought of as radiating a spherical wave that expands out with velocity  $c$ , traveling a distance  $ct$  after time  $t$ . A secondary wave front  $BB'$  is formed from the addition of all the wave amplitudes from the wave front  $AA'$ .

Huygens' construction of a diffracted wave from a transmission grating

The wave front is constructed by adding spherical waves from each slit of the grating. The wave emitted at a given slit is delayed by one full cycle with respect to the wave from an adjacent slit.
