Woody ornamental plants are key components of a well-designed landscape. Landscape plantings divide and define areas, add aesthetic and psychological benefits, and increase a property's environmental and economic value.

There are many woody plants available for use in landscaping, so select carefully. Choose plants based on their ability to fulfill your purposes and grow well in your property's environment.

Install landscape plantings according to a plan, keeping two factors in mind:

- Use the right plants in each area to create your desired design effect.
- Place plants in the right environment with proper sun exposure, temperatures, soil pH, drainage, and water.

Landscape plants last for many years. Making wise decisions for types of plants and giving plants proper growing conditions and care will help ensure that they remain a healthy and aesthetically pleasing part of your landscape.

Planting Trees and Shrubs

You can purchase trees and shrubs in a variety of ways (Figure 16.1):

- Bare-root (BR) plants have little or no soil around the roots. This method is common for deciduous plants and small evergreens shipped by mail during the cooler months.
- Balled and burlapped (B&B) plants are dug with soil around the roots, with the root ball enclosed in burlap or a synthetic material, and are often available year-round.

- Container plants are grown and sold in containers and are also available year-round.
- Field-potted plants are grown in a field, dug with or without soil, and potted into containers filled with organic media (substrate), field soil, or a combination of the two.
