Byrne,Stanley G. Schultz,1988 Physiology of Excitable Membranes J. Salánki,H. Meves,N. Chalazonitis,2013-10-22 *Physiology of Excitable Membranes* contains plenary lecture and most of the papers presented at five symposia of the Section General Cell Physiology at the 28th International Congress of Physiological Sciences Organized into 44 chapters this book begins with a discussion on the ionic mechanisms of excitability of nerve cells Subsequent chapters focus on charge movement in nerve membrane calcium electrogenesis optical changes during electrogenesis synaptic transmission and modulation and transmission in autonomic ganglia *Membrane Potentials* John Mouk Ort,1924 **Resting Membrane Potential** Robert Collin,1977 **Studies on the Membrane Potential,...** Jun - Ichi Nakagawa,1937 Membrane Potential Milan Marušić,2019 *Membrane Potential An Overview* provides trends for the development of novel membranes as separators with applicable properties The authors offer a comprehensive review of the various types of polymeric materials used as separators either as an electrolyte or not in different kinds of batteries The mathematical formulations of both membrane and fluid parts are reviewed and general governing equations of the membrane are presented Also general formulations of the fluid region and interface conditions between the membrane and fluid sides are presented The concluding chapter focuses on the estimation of the plasma membrane potential in yeast by the fluorescence changes of various indicators The most used of these indicators have been DiSC3 3 and DiSC3 5 **The Relation Between the Membrane Potential and the Ion Content of Smooth Muscle Cells** R. Kerkut,Barbara York,1971 *Bioelectrochemistry of Membranes* Dieter Walz,Justin Teissié,Giulio Milazzo,2012-12-06 *Bioelectrochemistry of Membranes* is the last volume in the book series *Bioelectrochemistry Principles and Practice* that provides a comprehensive compilation of physicochemical aspects of different biochemical and physiological processes This sixth volume introduces basic knowledge and important electrochemical and biophysical aspects of membrane potentials lipid bilayers and cell membranes The volumes of this book series serve as source books for advanced students and researchers at all levels of bioelectrochemistry *Perspectives in Membrane Biophysics* D. P. Agin,1972 Imaging Membrane Potential James Daniel Wilkinson,2014 **Affinity Membrane Potential** Masuo Aizawa,1982 **Electrical Potentials in Biological Membrane Transport** Erich Heinz,1981 The material of this volume was originally planned to be incorporated in the preceding monograph *Mechanics and Energetics of Biological Transport* A separate and coherent treatment of the variety of bioelectrical phenomena was considered preferable mainly for didactic reasons Usually the biologist has to gather the principles of bioelectricity he needs from different sources and on different levels The present book intends to provide these

principles in a more uniform context and in a form adjusted to the problems of a biologist rather than of a physicist or electrical engineer. The main emphasis is put on the molecular aspect by relating the bioelectrical phenomena such as the membrane diffusion potentials, pump potentials or redox potentials to the properties of the membrane concerned and as far as possible to specific steps of transport and metabolism of ions and nonelectrolytes. Little space is devoted to the familiar and widely used representation of bioelectrical phenomena in terms of electrical networks of equivalent circuits with batteries, resistances, capacities, etc. In order to elucidate the basic principles, the formal treatment is kept as simple as possible using highly simplified models based on biological systems. The corresponding equations are derived in two ways: kinetically, i.e. in terms of the Law of Mass Action, as well as energetically, i.e. in terms of Nonequilibrium Thermodynamics.

Cell Membrane Transport Arnost Kotyk, 2012-12-06. TO THE SECOND EDITION. When preparing the manuscript for the original edition of this book we were only partly aware of the pace at which the field of membrane transport was developing and at which new ideas as well as new techniques would be applied to it. The fact is that some of the chapters are now outdated, e.g. the one on the molecular aspects of transport and many others require revision in the light of new information that has appeared in the past five years. However, it is also true that we overemphasized in the first edition certain points that now appear less important and underestimated the impact of certain others that have since assumed a position among the most forcefully discussed topics of membrane research. In making amends, it was thus thought useful to include the discussion of these latter problems both in the theoretical and in the comparative sections and on the other hand to omit some of the less topical subjects. There was a different reason for rewriting the section on kidney and for dropping the section on mitochondria. The help of an expert nephrologist was enlisted for improving chapter 24 while it was decided that mitochondria represent a special field, both conceptually being only subcellular particles and methodologically more indirect estimation techniques being involved than with whole cells or tissues and that more adequate information can be found in treatises specializing in work with mitochondria.

Action Potential Marc L. DuBois, 2010. An action potential or nerve impulse is a transient alteration of the transmembrane voltage or membrane potential across an excitable membrane in an excitable cell such as a neuron or myocyte, generated by the activity of voltage-gated ion channels embedded in the membrane. The best known action potentials are pulse-like waves of voltage that travel along the axons of neurons. This book reviews research on action potential, including an overview of the role of specialised axonal excitability techniques in understanding the consequences of abnormal membrane excitability, the physiological implications of action potential in characean cells and action potential production and the ion channel dependent process and others.
