Guidance, Control and Docking for CubeSat-based Active Debris Removal

Mohamed Khalil Ben-Larbi, 2023-08-07 While a paradigm shift in space industry has already started involving mass production of higher standardized large distributed systems such as constellations there are no effective solutions existing for the mass removal of satellites Many indicators point to a further increase in the space traffic in Earth orbit in the near future which could imply new dynamics in the evolution of the space debris environment Even in case of diligent compliance with the Inter Agency Space Debris Coordination Committee IADC mitigation guidelines the growth in space traffic complicates its management and drastically increases the probability of accidents and system failures NASA scientist Donald J Kessler proposed a scenario in which the density of objects in low Earth orbit is high enough that collisions between objects could cause a cascade that renders space unusable for many generations Therefore a reliable and affordable capability of removing or servicing non functional objects is essential to guarantee sustainable access to Earth orbit Recently the CubeSat design standard introduced a new class of cost efficient small spacecraft and thereby offers a potential solution to the active

debris removal ADR problem The development of a novel CubeSat compatible ADR technology has significant advantages such as the use of commercial off the shelf parts reduced launch cost and reduced design efforts This thesis presents in the frame of an ADR mission an approach to advanced rendezvous and docking with non cooperative targets via CubeSat It covers the design process of simulation systems used for verification purposes the ideation and implementation of novel guidance control and docking techniques as well as their verification and evaluation The outcome of this research is a series of validated software tools processes technical devices and algorithms for automated approach and docking that have been tested in simulation and with prototype hardware

Neural Computation in Embodied Closed-Loop Systems for the Generation of Complex Behavior: From Biology to Technology Poramate Manoonpong, Christian Tetzlaff, 2018-10-11

How can neural and morphological computations be effectively combined and realized in embodied closed loop systems e.g robots such that they can become more like living creatures in their level of performance Understanding this will lead to new technologies and a variety of applications To tackle this research question here we bring together experts from different fields including Biology Computational Neuroscience Robotics and Artificial Intelligence to share their recent findings and ideas and to update our research community This eBook collects 17 cutting edge research articles covering neural and morphological computations as well as the transfer of results to real world applications like prosthesis and orthosis control and neuromorphic hardware implementation
