This guide assumes using the compiler from the MPLAB IDE Integrated Development Environment (IDE). However, you can use it from the command-line, as well. If you have a development board, you can download and run code on your device. You can also use the resources in MPLAB X IDE to confirm the operation of your code.

To demonstrate getting started with the MPLAB XCS C-Compiler, you will be guided through the creation of a project that you can build and run. The project features an LCD module connected to a port pin. To accomplish this, the following actions, presented here in summary, are performed. They are expanded and described in more detail as you progress through the pages of this guide:

- Install [MPLAB X IDE](#) on your host PC.
- Set the device Configuration bits using the [PIC18F4550](#) program.
- Enable any peripheral that uses the pin(s) used by the port.
- Initialize the port's data direction register, and write values to the port itself.
- Add a delay to ensure you can see the changes in state.

This guide assumes that you have MPLAB X IDE and MPLAB XCS C-Compiler installed and activated (if applicable) before you commence. You could also use an alternative version of the compiler, or the compiler operating in Free mode.

For assistance installing or activating the compiler, refer to [Installing and Running MPLAB XCS C-Compiler \(DS00002028\)](#). This document can be downloaded from the [Microchip Technology](#) web site, www.microchip.com.
