Student Projects in Environmental Science

Stuart Harrad, Lesley Batty, Miriam Diamond, George Arhonditsis, 2008-06-09. Research projects are among the core components of many undergraduate and Masters degrees within environmental science and physical geography, and students increasingly undertake courses in quantitative research methodology before starting on their own assignment. This one-stop shop text guides students through their research project from the initial stages of choosing a suitable topic, to conducting the relevant experiments and interpreting the data, through to effective presentation of the results. Takes a case study approach to illustrate the range of environmental science topics, with cases supplied by specialists in the field. Practical worked examples and self-assessment tasks illustrate key statistical and mathematical points, so as to keep heavy theory to a minimum. Covers software such as Excel, SPSS, and mathematical modelling, and includes statistical tables. *Environmental Science*

Robert K. Kaufmann, Cutler J. Cleveland, 2008. Unlike any other introductory environmental science text, Robert Kaufmann and Cutler Cleveland's *Environmental Science* takes a fresh approach to the subject by weaving themes of energy and materials, economic systems, and policy throughout the entire text. A story of real science is simply told through examples of cutting-edge content, real-world applications, and a distinctive conceptual illustration program. **Study Skills for Science Students**

Daniel D. Chiras, Director, the Evergreen Institute Center for Green Building and Renewable Energy, Daniel D. Chiras, Ph.D., 1994. Students learn simple ways to improve memory, learn more quickly, get the most out of lectures, prepare for tests, produce top-notch term papers, and improve critical thinking skills. The techniques for improved learning have been developed by the author and enable students to learn not only science material more effectively, but other courses as well. The text also includes discussions for making use of concept maps, computerized tutorials, videodiscs, videos, and group study to reflect the evolving pedagogy of textbooks and classrooms. *Energy and Climate Change*
