

Gen Chem 1 Lab Final Review

Introduction

- 1. We use titration
- 2. to determine the concentration of acids/bases. It is defined as the vol. of a known volume of a solution of known concentration (analyte) and vol. of a known concentration of solution.

Neutral titration

- 1. For a strong acid/strong base titration, the pH changes rapidly at the equivalence point. The pH is equal to 7.00. Thus, using neutral indicators, you can determine the equivalence point by a color change of the indicator.

From the titration

At the start: $\text{pH} < 7$ (strong acid) \rightarrow $\text{pH} > 7$ (strong base) as neutralizing solution is transferred to the container (kept as 1:1 volume ratio) (initial volume)

At the end: reversing the ratio (acid) of the acid/bases, goes to be a weak indicator. Base and acid (acid) at equivalence the production would be a weak indicator of acid.

From the titration

At the start: $\text{pH} < 7$ (strong acid) \rightarrow $\text{pH} > 7$ (strong)

At the end: reversing the ratio (acid) of the acid/bases, goes to be a weak indicator. Base and acid (acid) at equivalence the production would be a weak indicator of acid.

Strong base/Weak acid titration

- 1. There are two opposite colors
- 2. acid indicator
