

Gene Expression—Transcription

How is mRNA synthesized and what message does it carry?

Why?

DNA is often referred to as a genetic blueprint. In the same way that blueprints contain the instructions for construction of a building, the DNA found inside the nuclei of cells contains the instructions for assembling a living organism. The DNA blueprint carries its instructions in the form of genes. In most cases the genes direct the production of a polypeptide, from which other more complex proteins, such as enzymes or hormones, may be constructed. These polypeptides and other molecules run the organism's metabolism and, in multicellular organisms, dictate what each cell's job is. So, what is the language of these instructions and how are they read and decoded by the cellular organelles? This activity will focus on the decoding of genes in eukaryotes.

Epigenetics in Biological Communication Guenther Witzany, 2024-06-19 Every cell tissue organ and organism is competent to use signs to exchange information reaching common coordinations and organisations of both single cell and group behavior These sign mediated interactions we term biological communication The regulatory system that works in development morphology cell fate and identity physiology genetic instructions immunity memory learning physical and mental disease depends on epigenetic marks The communication of cells persistent viruses and their defectives such as mobile genetic elements and RNA networks ensures both the transport of regulatory instructions and the reprogramming of these instructions But how are the different states of the epigenome orchestrated The epigenetic pathways respond to various signaling cues such as DNA methylation histone variants histone modifications chromatin structure nucleosome remodeling and epigenetic interactions Epigenetic signals are responsible for the establishment maintenance and reversal of transcriptional states that are fundamental for the cell s ability to memorize past events such as changes in the external environment socio sphere or developmental cues External signals trigger changes in the epigenome allowing cells to respond dynamically Internal signals direct activities that are necessary for body maintenance and repairing damaged tissues and organs With the emergence of epigenetic memory organisms can fix historical and context dependent impressive experiences Evolution from now on learnt to learn Learning means organisms can avoid reproduction of always the same This is key to adaptation However inheritance of acquired characteristics is only one of the many examples of the explanatory power of epigenetics Behavioral epigenetics demonstrates the way in which environmental and social experiences produce individual differences in behaviour cognition personality and mental health This book assembles experts to outline the various motifs of all kinds of epigenetic regulation of cells throughout their lives
