Loss Models: From Data to Decisions, Book + Solutions Manual Set Stuart A. Klugman, 2019-05-21 A modern practical guide to building and using actuarial models Loss Models From Data to Decisions is organized around the principle that actuaries build models in order to analyze risks and make decisions about managing the risks based on conclusions drawn from the analysis In practice one begins with data and ends with a business decision The book flows logically from this principle It begins with a framework for model building and a description of frequency and severity loss data typically available to actuaries Parametric models are emphasized throughout The frequency and severity

models are used in building aggregate loss models in credibility based pricing models and in loss analysis over multiple time periods Designed as both an educational text as well as a professional reference Loss Models Assumes little prior knowledge of insurance systems Features many fascinating examples taken from insurance files Contains a major instructive case study continued through each chapter Covers the classical areas of risk theory and loss distributions Gives a practical but rigorous treatment of modern credibility theory Uses standard statistical concepts methods and notation Provides modern computational algorithms for implementing methods Includes free companion software available from an FTP site Deals with many topics on CAS 4B and SOA 151 and 152 actuarial exams Includes many exercises based on past CAS and SOA exams

Handbook of Monte Carlo Methods Dirk P. Kroese, Thomas Taimre, Zdravko I. Botev, 2011-03-15 The purpose of this handbook is to provide an accessible and comprehensive compendium of Monte Carlo techniques and related topics It contains a mix of theory summarized algorithms pseudo and actual and applications Since the audience is broad the theory is kept to a minimum this without sacrificing rigor The book is intended to be used as an essential guide to Monte Carlo methods to quickly look up ideas procedures formulas pictures etc rather than purely a monograph for researchers or a textbook for students As the popularity of these methods continues to grow and new methods are developed in rapid succession the staggering number of related techniques ideas concepts and algorithms makes it difficult to maintain an overall picture of the Monte Carlo approach This book attempts to encapsulate the emerging dynamics of this field of study
