## Figure it Out

1. Colour or mark the supercells in the table below.

6828	670	9435	6828	3780	7308	8000	5583	52
------	-----	------	------	------	------	------	------	----

2. Fill the table below with only 4-digit numbers such that the supercells are exactly the coloured cells.

5346		1258				9635	
------	--	------	--	--	--	------	--

3. Fill the table below such that we get as many supercells as possible. Use numbers between 100 and 1000 without repetitions.

--	--	--	--	--	--	--	--	--

4. Out of the 9 numbers, how many supercells are there in the table above? \_\_\_\_\_

5. Find out how many supercells are possible for different numbers of cells.

Do you notice any pattern? What is the method to fill a given table to get the maximum number of supercells? Explore and share your strategy.

6. Can you fill a supercell table without repeating numbers such that there are no supercells? Why or why not?

7. Will the cell having the largest number in a table always be a supercell? Can the cell having the smallest number in a table be a supercell? Why or why not?

8. Fill a table such that the cell having the second largest number is not a supercell.

9. Fill a table such that the cell having the second largest number is not a supercell but the second smallest number is a supercell. Is it possible?

10. Make other variations of this puzzle and challenge your classmates.

## Answer:

1. Supercells in the table:

6828	670	9435	6828	3780	7308	8000	5583	52
------	-----	------	------	------	------	------	------	----

2. 4-digit numbers to make the coloured cells as supercells:

5346	6000	1000	1258	1100	1200	1300	9635	9800
------	------	------	------	------	------	------	------	------

3. Getting as many supercells as possible using numbers between 100 and 1000:

800	400	500	300	450	200	700	470	900
-----	-----	-----	-----	-----	-----	-----	-----	-----

4. Out of the 9 numbers, there are 5 supercells in the table above.

5. The number of supercells are more than or equal to half the number of cells. Yes, the pattern I notice is that supercells tend to occur more frequently in the middle of the grid, where a cell has more neighbouring cells to compare to. The number of maximum number of supercells can be half of the cells or one more than half (half + 1) of the total number of cells.
