Mathematical Literacy Exemplar June 2014:

International Practices to Promote Budget Literacy Harika Masud, Helene Pfeil, Sanjay Agarwal, Alfredo Gonzalez Briseno, 2017-08-09 Budget literacy is defined as the ability to read, decipher, and understand public budgets to enable and enhance meaningful citizen participation in the budget process. It is comprised of two main parts: i) a technical understanding of public budgets including familiarity with government spending, tax rates, and public debt; and ii) the ability to engage in the budget process, comprising of practical knowledge on day-to-day issues as well as an elementary understanding of the economic, social, and political implications of budget policies, the stakeholders involved, and when and how to provide inputs during the annual budget cycle. Given that no international standards or guidelines have been established for budget literacy education to date, this book seeks to address this gap by taking stock of illustrative initiatives promoting budget literacy for youth in selected countries. The underlying presumption is that when supply-side actors in the budget process (governments) simplify and disseminate budget information for demand-side actors (citizens), this information will then be used by citizens to provide feedback on the budget. However, since citizens are often insufficiently informed about public budgets to constructively participate in budget processes, one way to empower them and to remedy the problem of budget illiteracy is to provide budget literacy education in schools to youth, helping them evolve into civic-minded adults with the essential knowledge needed for analyzing their government's fiscal policy objectives and measures and the confidence and sense of social responsibility to participate in the oversight of public resources. This book elaborates on approaches, learning outcomes, pedagogical strategies, and assessment approaches for budget literacy education and presents lessons that are relevant for the development, improvement, or scaling up of budget literacy initiatives. *The Routledge Companion to Transmedia Studies* Matthew Freeman, Renira Rampazzo Gambarato, 2018-10-09 Around the globe, people now engage with media content across multiple platforms, following stories, characters, worlds, brands, and other information across a spectrum of media channels. This transmedia phenomenon has led to the burgeoning of transmedia studies in media, cultural studies, and communication departments across the academy. *The Routledge Companion to Transmedia Studies* is the definitive volume for scholars and students interested in comprehending all the various aspects of transmediality. This collection, which gathers together original articles by a global roster of contributors from a variety of disciplines, sets out to contextualize, problematize, and scrutinize the current status and future directions of transmediality, exploring the industries, arts, practices, cultures, and methodologies of studying convergent media across multiple platforms. **The Leading Edge of Early Childhood Education** Nonie K. Lesaux, Stephanie M. Jones, 2021-02-23 *The Leading Edge of Early Childhood Education* aims to support the effort to simultaneously scale up and improve the quality of early childhood education by bringing together relevant insights from emerging research to provide guidance for this critical, fledgling field. It reflects the growing recognition that early childhood experiences have a powerful effect on children's later academic achievement and long-term life outcomes.

Editors Nonie K Lesaux and Stephanie M Jones bring together an impressive array of scholarly contributors. Topics include creating learning environments that support children's cognitive and emotional development; identifying and addressing early risk factors; using data to guide educators' practice; and capitalizing on the use of technology. Recent years have seen a surge of local, state, and national initiatives aimed at expanding and improving early childhood initiatives, particularly regarding access to preK programs. *The Leading Edge of Early Childhood Education* promises to be a valuable resource for those charged with enacting the next level of work in this critical area.

Development of executive function during childhood
Yusuke Moriguchi, Philip D Zelazo, Nicolas Chevalier, 2016-04-01
Executive function refers to the goal-oriented regulation of one's own thoughts, actions, and emotions. Its importance is attested by its contribution to the development of other cognitive skills, e.g., theory of mind, social abilities, e.g., peer interactions, and academic achievement, e.g., mathematics, and by the consequences of deficits in executive function, which are observed in a wide range of developmental disorders such as attention deficit hyperactivity disorder and autism. Over the last decade, there has been growing interest in the development of executive function, and an expanding body of research has shown that executive function develops rapidly during the preschool years, with adult-level performance being achieved during adolescence or later. This recent work, together with experimental research showing the effects of interventions targeting executive function, has yielded important insights into the neurocognitive processes underlying executive function. Given the complexity of the construct of executive function, however, and the multiplicity of underlying processes, there are often inconsistencies in the way that executive function is defined and studied. This inconsistency has hampered communication among researchers from various fields. This Research Topic is intended to bridge this gap and provide an opportunity for researchers from different perspectives to discuss recent advances in understanding childhood executive function. Researchers using various methods, including behavioral experiments, neuroimaging, eye tracking, computer simulation, observational methods, and questionnaires, are encouraged to contribute original empirical research. In addition to original empirical articles, theoretical reviews and opinion perspective articles on promising future directions are welcome. We hope that researchers from different areas, such as developmental psychology, educational psychology, experimental psychology, neuropsychology, neuroscience, psychiatry, computational science, etc., will be represented in the Research Topic.

Connecting People to Their Oceans: Issues and Options for Effective Ocean Literacy
Angel Borja, Francesca Santoro, Gail Scowcroft, Stephen Fletcher, Pierre Strosser, 2020-03-25
While there is growing evidence of the importance of marine ecosystems for our societies, evidence shows also that pressures from human activities on these ecosystems are increasing, putting the health of marine ecosystems at stake worldwide. Hence, Blue Economy is becoming an important component of future socio-economic development strategies, e.g., this is called Blue Growth in Europe, that eventually can result in increasing pressures at sea, and despite the current regulatory framework, in particular with the Oceans Act in USA or Canada and the Marine Strategy Framework Directive in Europe, it is likely that this situation will

continue in the future Ensuring all those connected to the sea directly or indirectly gain a better understanding of the importance of the seas the human sea interactions and opportunities to act better and reduce impacts from human pressures is central to Ocean Literacy OL Receiving increasing attention in Europe and USA OL is a challenge for all parts of society educators 2 the role OL could play in interaction with innovation regulation economic incentive social norms to support human capital development as key component of sustainable growth and 3 pre conditions for effective OL for different sectors and target groups Questions relevant to OL include Which knowledge produced by whom to share and how Who to target and how to effectively reach those targeted How to design OL initiatives including by mobilizing those targeted via living lab approaches e g to ensure effective OL and pave the way for behavior change What are the knowledge gaps that limit our capacity to design effective OL As scientists it is likely you have many more questions to offer and discuss
