

**Comprehensive Basic Science Examination****Score Interpretation Guide**

NBME<sup>®</sup> subject examinations provide medical schools with a tool for measuring examinees' understanding of the basic sciences. Although these examinations are designed to be broadly appropriate as part of overall examinee assessment, course objectives vary across schools, and the congruence between subject examination content and course objectives should be considered when interpreting test scores and determining grading standards. Specifically, subject examination scores should not be used alone, but rather in conjunction with other indicators of examinee performance in determination of grades.

**Subject Examination Scores**

The subject examination score is scaled to a mean of 70 and a standard deviation of 8. A CBSE score of 70 is approximately equivalent to a score of 200 on the United States Medical Licensing Examination<sup>®</sup> (USMLE<sup>®</sup>) Step 1. The vast majority of scores range from 45 to 95, and although the scores have the "look and feel" of percent-correct scores, they are not. Because the CBSE and USMLE Step 1 cover very similar content, this scale provides a useful tool for comparing the scores of your examinees with those of a large, nationally representative group taking the licensing examination at the end of the second year of medical school. Additional information about the relationship between CBSE scores and USMLE Step 1 scores is provided in the table on the next page.

Unlike percent-correct scores, subject examination scores are statistically equated across test administrations. Scores are statistically adjusted for shifts in test difficulty across different forms of the examination. This makes it possible to track school and examinee performance over time.

**Precision of Scores**

Measurement error is present on all tests, and the standard error of measurement (SEM) provides an index of the (im)precision of scores. The SEM indicates how far an examinee's score on the examination might stray from his/her "true" proficiency level across repeated testing using different sets of items covering the same content. Using the SEM, it is possible to calculate a score interval that will encompass about two thirds of the observed scores for a given true score by adding and subtracting the SEM from that score. For this examination, the SEM is approximately 3 points. For example, if an examinee's true proficiency on the examination is 60, the score he/she achieved on the examination will usually (two times out of three) fall between 57 and 63 ( $60 - 3$  and  $60 + 3$ ).

**Score and Performance Feedback**

Summary information on the examinee group tested, examination purpose and number of items scored is provided on each page of the feedback.

The *Roster of Scaled Scores* reports a total test scaled score for each examinee. Reported scores also appear in a comma separated text file that can be downloaded and used to export scores.

If there were at least 2 examinees, *Scaled Score Descriptive Statistics* for reported scores are provided along with a *Frequency Distribution* of the total test scaled score.

If there were at least 10 examinees, a *Content Area Item Analysis Report* is provided.

If there were at least 15 examinees, a *School Summary Performance Profile* is provided.

An *Examinee Performance Profile*, which graphically displays content areas of strength and weakness, is provided for each examinee.
