

Biologists are working on molecular level to improve the life of their society. However, it is after their second degree education most biologists become experts. Providing students basic biology knowledge in their early education can help a nation producing more scientists. One of the ways providing basic knowledge is supporting principles by doing experiments and practical activities. In most schools and universities teachers prepare manuals separately for each experiment. This has serious limitation; students may not keep the material after they complete each experiment, would not have the details of the next experiment, would not have chance to exercise next activities before they come to the experiment, and others. At the same time such manuals usually do not introduce academic and lab safety rules, and possible sources of hazards to the students. Therefore, this manual is prepared to cover 11 experiments emphasized on classical genetics and statistical analysis tools to lay basic knowledge at early education for advanced genetics. It also provides information on hazardous substances, lab report format, fact sheets, and academic and safety rules to avoid the above limitations.

Babcock, 2017-05-15 Excerpt from Genetics Laboratory Manual It is assumed that the laboratory course will accompany and supplement a combined lecture and recitation course and this manual is intended in particular to supplement the text book Genetics in Relation to Agriculture by Babcock and Clausen Although it may seem advisable in some cases to alter the sequence Of laboratory exercises according to the progress of the class in the study of subject matter in the text and lectures yet it may be found more feasible to assign certain portions Of the text to precede accompany or closely follow certain laboratory ex croises Probably the latter would be the wiser plan inasmuch as the laboratory exercises may occasionally have to be shifted in order to take advantage of a certain stage of

development in plants or for various other reasons With these provisions in mind the following series Of exercises are recommended The exercises referred to here by number will be found in proper sequence in the body Of the manual It will be remembered that under each number there are three alternatives designated as a b and c If the a series Of exercises is used in 1919 the b series may be used in 1920 and the a series in 1921 or by selecting and rearranging individual exercises an instructor can make up an entirely different course Of one two or three laboratory periods per week as desired Certain exercises however call for material which can hardly be duplicated and it is recommended that they be included in each year s work Further suggestions and various specific aids to laboratory work will be found in the appendices About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
